A: Check out this to force Post to login: Force Login Redirect from Login ASP.NET MVC Web Forms Authentication It might be overkill on the first implementation, but it can be the solution to your problem. So the summer's coming to an end, the leaves are turning, and then things turn back to reality. Today, we're going to take a bit of a break from the time consuming politics and future planning discussion (looking at you, our Political Science teacher) and go into a bit of a different topic. No, not sex, quite the opposite actually! As previously, this isn't much of a history lesson, the basics of this are fairly well understood for anyone that has spent more than a few minutes with Google. However, what's slightly different is that with this, it's going to be aimed towards a more general audience. We're going to be taking a look at the culture shock that many would be experiencing when moving to a new nation. You'll be hearing the same questions, the same befuddling as last time, but that doesn't mean they won't be answered. So this time, there's going to be a bit more of a focus on the thoughts and feelings of the individual that's currently being impacted. That isn't to say, however, that this isn't for anyone, as the art is still just as compelling.Q: Can't use local resources in template I tried to use file system in IOS Universal app, my file is added successfully to.xcodeproj, but it is not working in template, but I can use resource at same time without any problem, I tried code like below, all the resource in first line are available, NSFileManager.defaultManager().contentsOfDirectoryAtPath(, errorHandler:

Design of a 14-Mb transgenic complementation system of Listeria monocytogenes EGD-e. Listeria monocytogenes is a food-borne pathogen that causes listeriosis, which is the most widespread and serious form of listeriosis. To elucidate the life cycle of L. monocytogenes, gene-trapping approaches have been used to analyze gene functions in L. monocytogenes. L. monocytogenes contains DNA sequences homologous to inducible rhamnose catabolic gene island (rhamnose catabolic genes)-mediated rhamnose utilization in Salmonella enterica, which are predicted to have a 17-kb genomic island and a 7-kb element. To study the precise function of this element, we designed a strategy to disrupt the gene responsible for high-level rhamnose utilization. Three strategies were used to disrupt genes for high-level rhamnose utilization and construct a non-polar deletion mutant, the EGD-e strain. The strategy based on a clean gene-trap system contains two plasmids, pJEB107 and pJEB67. The cleavage of pJEB107 is initiated by in vitro recombination and L. monocytogenes cleavage enzyme, resulted in the creation of an I-SceI gene, which is controlled by the L. monocytogenes hly promoter and FLP recombinase. After the removal of plasmid pJEB107, plasmid pJEB67-containing a functional rhamnose catabolic gene is integrated into the genome of the mutant. The strategy based on an inducible rhamnose catabolic gene island contains two plasmids, pGPEB1 and pGPEB2. The cleavage of pGPEB2 is initiated by in vitro recombination and L. monocytogenes cleavage enzyme, resulted in the creation of an I-SceI gene, which is controlled by the L. monocytogenes hly promoter and FLP recombinase. After the removal of plasmid pGPEB2, plasmid pGPEB1-containing a functional rhamnose catabolic gene is integrated into the genome of the mutant. The strategy based on a functional rhamnose catabolic gene island contains two plasmids, pGPE
