This capability is not dependent on the type of computer on which AutoCAD is installed. If you have installed AutoCAD on a computer that supports Windows 3D, you can import 3D files directly into AutoCAD. If you install AutoCAD on a computer that does not support Windows 3D, you must use 3DS Max or PhotoShop to create and import the 3D models. If you are using a desktop computer with a built-in graphics card, you can use Windows 3D. If you are using a Macintosh with an external graphics card, you can use only 3DS Max or PhotoShop. Install Windows 3D on your computer Use the Autodesk program Management Console (AutoMgr) to register 3DS Max, or use the AutoMgr to register PhotoShop if you want to use those products instead of 3DS Max. Read the following procedure carefully before starting it. It describes how to install Windows 3D in the typical Windows environment. If you do not install Windows 3D, the steps that follow will not be useful to you. See Chapter 14, "Using Microsoft Windows," for instructions on installing Windows 3D. If you have previously installed Windows 3D and are now installing AutoCAD on a different computer, you must perform these steps again. Select Start and then click Programs. on July 25, 2010 Autodesk released AutoCAD WS, Web Services. It is a component-based API. on July 13, 2012, Autodesk published the AutoCAD XML Interchange Format (XIF). Workgroups The Autodesk® Workgroup Server provides a central location to manage and display collaborative 3D models. Autodesk's Workgroup Server leverages Autodesk® 360 to capture and manage 3D content in the cloud, making it easy for partners to display and enable 3D collaboration. Autodesk's Workgroup Server has been designed from the ground up to leverage Autodesk's Autodesk 360, a platform for 3D collaboration that allows users to simultaneously view and work on different versions of shared 3D content. Autodesk allows partners to display and enable 3D collaboration on any mobile device, like iPhones, iPads, and Android devices. Autodesk Revit supports the following workgroups: Public View (Public), Collaborative View (Contribute), Public View (Ad-hoc), and In-House View (Visibility). Workgroups are not supported in most Autodesk programs, including AutoCAD. Network access Autodesk Hosted Work Management provides network access to AutoCAD users. The work management system enables users to submit 3D model changes from anywhere, manage project reviews, manage material information, and view materials. This means that no matter where the Autodesk-registered user is, he or she can submit changes. If approved, they are approved automatically. Autodesk Hosted Work Management manages project tracking and resource allocation, and is intended to replace Autodesk Online, which is no longer supported. Unlike AutoCAD, Autodesk Revit does not have an Autodesk Hosted Work Management. Revit support for community cloud Revit 2016, the current version of Autodesk Revit, has a revit-cloud package that allows rendering and viewing architectural drawings in the cloud. I have this working and I'm using django-endless-pagination to allow for showing all items and removing from the bottom when you hit the next page. When an item is processed and removed it's placed in a CSV file that is being uploaded and processed by our back end processing system. I'd like to add a checksum to the file to verify that it's original. This would be used to cross reference the CSV file and the database. The basic model is: class Inventory(models.Model): file_name = models.CharField(max_length=150) # more fields timestamp = models.DateTimeField() csv_file = models.FileField(upload_to='inventory/') # more fields I need to implement something that checks the file and sets the field csv_file if the checksum is good. It seems that if I make csv_file a FileField the field doesn't update the file after it's changed, and if I make it a FileField I can't find a good way to check the file. I can use a Model instance to check the file, but it seems like I should have access to the models.FileField.file. I can't find an easy way to do this. I'm looking for the right
