3D Architectural Design / Modeling You do not need a prior design skills to create a fully detailed 3D model of your city, thanks to CityEngine, you'll be able to build your own environment in no time. Easy to use, requires no special training You have just to fill in a blank interface where you can add objects and tie them together to create a complete vision of your imaginary city. 3D Building modeling It's not just the CityEngine that does all the hard work for you, but also allow to you to build and customize most of the buildings in the environment. Buildings can be composed by stacking them layer by layer. Imaginative shapes and textures The buildings of your city can be shaped to look very realistic thanks to the random texture generator, giving to them a more attractive look. Automatic mesh generation Once all the buildings are in place, CityEngine automatically generates a complete mesh of the city, so modifying and repairing it is effortless. Advanced automatic dimensioning Use CityEngine's embedded dimensioning to automatically and accurately add geometric information to your projects. CityEngine Features: Automatic mesh generation CityEngine automatically generates a mesh with all the necessary details for your project. You can then easily and accurately modify or repair the meshes as required. Advanced automatic dimensioning Automatic dimensioning removes the pain of adding geometry to your projects. 3D Modeling and modeling tools CityEngine lets you add dimension lines, create faces, build up areas and so on in 3D. Stacks and links CityEngine allows you to link different layers together, making it simple to nest structures into each other. Advanced materials (textures) CityEngine lets you use textures to create and apply unique materials to your objects. Dynamic textures CityEngine lets you create and apply unique textures to individual objects and groups of objects using dynamic textures. Object grouping CityEngine lets you group and ungroup objects to make projects easier to manage, and gives you a convenient interface to access all of your objects. Interactive tools CityEngine gives you basic tools to interact with your project: rotate, move, zoom and set cameras. Warranty: 30 days (1 year) The program free for download. The definitive city building package with support for 2D and 3D modeling, design, rendering and rendering as pdf. CityEngine is a professional 3D modeling and visualization tool for architects, designers and 3D artists to create and design detailed and realistic models of buildings and environments. CityEngine works with a wide range of GIS data, including shapefiles, CAD data, satellite images, or even traditional artists files as input. The powerful set of tools allows you to view, edit and optimize your projects very easily. Its basic but powerful set of commands includes all the necessary and indispensable tools to make your job easier. In order to get maximum control, some commands are set to be active by default, but they are all very easy to access and configure. The 3D modeling features of CityEngine are associated to a whole set of more detailed editing and rendering features. The combination of GIS data and CAD data enables you to create a realistic and detailed project which can be further enhanced by the use of textures. By using CityEngine you will have all the required information to add more details. 3D lighting effects are available, while bump-mapping and different hues of green also help to further enhance your models. If you need just a more simple 3D view of your projects, CityEngine offers all the tools to convert models into two-dimensional designs suitable for editing and design. Thanks to two-dimensional GIS data and the 2D editing tools, you will be able to integrate all the elements and details of the project inside the 2D designer. CityEngine can export different types of 2D and 3D files. The 3D files can then be viewed, edited, etc. with other applications like PLM or SketchUp, or other 3D packages. CityEngine features a simple but complete set of tools that will allow you to create complex and realistic 3D models and designs in a very short time. The features and tools of the software are very well organized and easy to understand, so even a newbie will be able to work with the application in no time. CityEngine functionality: - 2D and 3D modeling, editing and optimization; - Freehand sketching and direct manipulation of model; - BIM integration (BIMautomation); - Texture and bump-map; - Automatic real-time rendering; - Supports image sequences and animation; - Multi-selection; - Double-click; - Interaction with other layers;
