Json Editor [Win/Mac]

Fast. Simple. Portable. The editor has no dependencies other than Eclipse itself. It can be used to edit JSON data directly in Eclipse (with no extra plug-ins) as well as in other text editors. It also includes a validation and syntax highlighting function. Fast. Highlighting, highlighting of the number sign, time display, and validation is done in a fraction of the time as it might be done in some editing tools. Simple. The Java parser is complete and covers all the JSON grammar rules. Everything else is just a syntax highlighter. Portable. Portable, zero dependencies (unless your text editor needs them to function). This should make it easy to send JSON data to other text editors. (FAQ) How do I install Json Editor? This is done in two steps, you first download the basic plugin. Then you go into the Eclipse plugins directory (e.g., C:\Program Files\Eclipse) and look for the folder myeclipse that contains the subdirectory plugins. Right-click on that folder and choose Install New Software. Click Add. Type in as the name. Click Next. Click on Text and XML editors at the top. Click on All Available Sites. Click Close. Go back to the plugins folder and look for the folder content.jsoneditor. Right-click on it and choose Install. Click Next. Click Install. A green window will open in which you will be asked for information about the installation. Click Finish. That's it. (FAQ) How can I get the source code?
