"Lifetime shows you the number of days, hours or effective hours left until a target date. The starting date and time can be set to the current time, a date in the past, or you can specify a date in the future." Note: if you exit with the focus on Lifetime, the current time is still displayed for some time. Copy the following code to import the Unity package and use it in your project: using UnityEngine; using System.Collections; public class Test : MonoBehaviour { private void Update() { DateTime theStart = DateTime.Now; DateTime theTarget = new DateTime(2020, 10, 9); DateTime theCurrent = DateTime.Now; TimeSpan theSpan = theTarget - theStart; double theDaysLeft = theSpan.Days; TimeSpan theHoursLeft = (TimeSpan)((double)theSpan.Hours \* 24.0); TimeSpan theEffectiveHoursLeft = theHoursLeft.TotalMinutes; Debug.Log(theDaysLeft.ToString("f0") + " days, " + theHoursLeft.ToString("f0") + " hours, " + theEffectiveHoursLeft.ToString("f0") + " effective hours to the target date."); } } For example, you set the starting date and time to 07/13/2020, you set the target date to today, 08/12/2020, you exit with the focus on Lifetime, you would see the following 0 days, 5 hours, 59 effective hours to the target date. Pouring his heart and soul into a new album, jazz pianist Keith Jarrett's compositions in his new Stones album, 36 Chambers, were completed over a period of 25 years. Though the band was dissolved during the recording process, Jarrett's compositions remain among the greatest in

A small gadget designed to help you permanently view the time passed since the time of the start date and time.

----- I've been working on a small app which tracks the time using Context. I'm using R.java to store the current time-stamp of the Context and Time. This way I can easily change the time-stamp and compare the time passed since the target date with the time passed since the start date. However, this method will only work if the app is not changed in the middle of the date/time range. Otherwise Context.getLastAccessedTime() will return something different than the current time-stamp. How do you guys deal with this problem? Should I refactor and store the time-stamp in a DB to get a more accurate time-stamp and then compare it somehow or is there another (better?) way? Is my approach a good one? Thanks, Sam A: Context.getLastAccessedTime() should return you a new timestamp everytime the app is opened. So it will not return different values when the app is changed in the middle of the target date. Also, you should use getExternalFilesDir() if you want to store the time-stamp on your sdcard. This will save you some space on your internal storage. You have to compare the time passed since the start date with the time passed since the target date. Like this: @Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); final Calendar calendar = Calendar.getInstance(); //Log.d(TAG, "onCreate : " + calendar.getTime()); calendar.setTimeInMillis(System.currentTimeMillis()); calendar.set(Calendar.YEAR, this.year); calendar.set(Calendar.MONTH, this.month); calendar.set(Calendar.DAY\_OF\_MONTH, this.day); calendar.set(Calendar.HOUR\_OF\_DAY, this.hour); calendar.set(Calendar.MINUTE, this.minute); calendar.set(Calendar.SECOND, 0); 09e8f5149f

Lifetime is a small gadget designed to help you permanently view the time passed since a start date and time. Lifetime is a very simple app that shows the time passed since a start date and time. This applicable to large time and night loss. Lifetime is not a clock. You can set a start date/time and a target date/time. Lifetime shows the effective time passed since the start date. The target date and time is not possible to be modified. There is the "Show on Phone" button. There is no need to turn on your phone. Lifetime will automatically be showed with the time passed. Lifetime is not a clock. It allows you to view the time passed since your desired date/time. Lifetime can be used while sleeping. You can set it to the start time of the day. There is no relationship between the time of your phone or the Internet access. Lifetime can be searched on the internet. **Note:** This app is an unofficial, third-party app. This app is not under the direct authority of Sony. Bugs Issues:

- + The start time of the day may not be the corresponding time ( $\neq$  the set time).
  - + The "Cancel" button is not clear.
  - + The start time of the day may be interfered by Sleep.
  - + The set time of the day is not possible to be corrected.
  - + The start time of the day does not automatically adjust when the date/time is modified.
  - + The "OK" button has no effect.
  - + The "OK" button must be clicked repeatedly.
  - + The "OK" button is not possible to be corrected.
- Note:** This app is an unofficial, third-party app. This app is

**System Requirements For Lifetime:**

**ZED 3: UNLIMITED.** - This game does not need much in the way of hardware, however it does need a graphic card that will run the game smoothly and has 2 GB of memory to work with. **Wii: ZED 3: UNLIMITED.** - This game requires a Wii, which means it should be able to run on the Wii's SD Card. **360, PS3: ZED 3: UNLIMITED.** - This game requires a PS3, which means it should run on the PS3's HDD.
