Raster is a form of digital image that is stored as an array of dots or pixels, much like the dots that are used to form images in traditional image formats like JPEG. The dots or pixels also map to colors that can be easily created on a computer monitor. Photo: Wikimedia Commons Composed of pixels that can be edited and used for creating specific color and style effects, raster images are often used for the display of digital versions of printed images, stock photos, and illustrations. Raster images can also be animated through various video editing programs. Why should I use Photoshop? Effects of the introduction of a hospital-based pathology service on the pre-operative diagnosis and management of patients requiring upper gastrointestinal endoscopy. Recent years have witnessed extensive development and growth in the specialty of gastroenterology. Along with this has come an increase in the complexity and demands on endoscopic services. We studied the impact of changes in the clinical pathway for upper gastrointestinal endoscopy on a number of aspects of patient care. A retrospective review was performed of the case-notes of all patients having upper gastrointestinal endoscopy or endoscopic ultrasound during a study period in 2000. Data collected included the indications and results of any endoscopic procedures, adverse events, the length of hospital stay and diagnostic yield of endoscopy. During the study period, 1188 upper gastrointestinal endoscopies were performed at Wigan and Leigh NHS Trust, a major referral centre in Northern England. Of these, 92% were diagnostic. The most common indications for endoscopy were peptic ulcer disease (38%) and dyspepsia (33%). The overall diagnostic yield of endoscopy was 85% for upper gastrointestinal endoscopy and 94% for endoscopic ultrasound. Patients undergoing endoscopy were older (median age, 56 years) than those receiving upper gastrointestinal endoscopy without a biopsy (median age, 48 years). The mean length of hospital stay for patients undergoing endoscopy was 3.1 days compared with 6.9 days for those undergoing an endoscopic ultrasound procedure (p

The Dodge and Burn tools allow you to manipulate colors to bring out or darken shadows and highlights. These are used for retouching and restoration. The Blur and Sharpen tools are great for refining and adjusting images. The Wipe tool lets you clean up images and remove unwanted elements from images. You can use the radial or curve tools to create different effects. The Liquify tools make it easy to resize, reorient, and distort objects in an image. Use the direct drawing feature to quickly draw in freeform. Liquify also has the ability to create a level of control over the amount of distortion you want to apply. In this lesson we will learn how to apply effects using the different tools, brushes, and tools in Photoshop. We will experiment with applying multiple effects in one step. We will also talk about how to clean up a layer to remove unintended features and remove unwanted objects from our images. Remember, the number of pixels per inch in your image determines the actual size of the image and you can see how the size of the image can impact the resolution of your image. The image in this exercise has a resolution of 300dpi. Our image is 7184 pixels wide and 2022 pixels tall, but that can still exceed the actual size of the image.
