InDesign lets you create, import, and export a variety of file formats, including PDF files, which may be a benefit if you're always producing PDF files. (PDF stands for Portable Document Format, the standard file format that Adobe has developed for the printing and distribution of documents.) You can also create and save EPS images.

Albania is willing to open its doors to refugees from Syria and Iraq, according to Prime Minister Edi Rama, who said his government will not stand in the way of those fleeing violence and terror. "If there are refugees from Syria and Iraq we will not refuse them. Albanians have always been humane. We know that there are people with wounds from war, murder and persecution. We want to be a refuge. We want to offer them a solution that will help them become Albania's citizens," Rama told an audience in the capital Tirana, as cited by Ilazgan news agency. The prime minister also suggested that western states should help refugees by providing humanitarian assistance in their home countries. "We think that every country has the right and the duty to help the people who have fled, especially those countries whose governments had a role in the start of the conflict. We want to ask America, Europe, Russia, to help their citizens and we want to help our citizens in Syria and Iraq," Rama said. Previously, the prime minister called the US for help and suggested that the country was prepared to accept refugees from Iraq and Syria. According to the statements of officials from the

Albanian government, the country is ready to open its door to Iraqi and Syrian refugees. During the last two years, Albania has taken in more than 10 thousand foreigners, including refugees. The countries that have sent the most refugees are Serbia (more than 28 thousand people), Bosnia-Herzegovina (more than 20 thousand people), and Kosovo (about 10 thousand people). Read more Last week, several leaders from the European Union said it would work on integrating refugees by taking steps to secure their education and integration in EU member states. "We need to ensure that [Syrian and Iraqi refugees] have full access to education, healthcare, employment and social services and that the rights of migrants and refugees are fully protected," said Frans Timmermans, the First Vice-President of the European Commission. The officials, who were discussing migration and development issues in the European Commission's migration department, have also pointed to the fact that the EU is more likely to receive refugees, particularly unaccompanied children, than any other part of the world. Germany is currently at the top of the list, having registered almost 160 thousand people, but the officials hope that the offer of help to refugees will be seen as a commitment to the EU's goal

By Matt Rooney, CNN A new study suggests that giving vaccines to children can alter their gut flora and their subsequent behavior, raising the possibility that childhood vaccination may impact children's risk of developing psychiatric disorders later in life. The study from researchers at Harvard University's T.H. Chan School of Public Health published Monday in *mBio* suggests a causal link between vaccines and behavior and a possible etiologic role for the gut. "We found that in mice, the gut microbiome is acutely altered by vaccine antigens and that these changes can lead to long-lasting psychiatric-like disorders," said study author Christopher Lowry, associate professor of genetics and medicine at Harvard University. "Changes to the gut microbiome occur with exposure to a wide range of environmental factors, including our diet," Lowry told CNN. "But we think this is the first instance where a vaccine induces rapid and profound changes in the microbiome." Lowry and his team found that exposure to the protein ovalbumin, or cow's milk allergens such as alpha-lactalbumin, altered the gut microbiome of mice. Then the team looked at the behavioral characteristics of the

mice, finding that these altered microbiomes were associated with a wide range of behavioral disorders in adulthood. “Over time, these changes to the gut microbiome may contribute to the development of behavioral disorders that are characterized by changes in anxiety and depression,” said Lowry. Lowry said that it is unknown how and why the vaccines may alter the gut microbiome of children, but he said that gastrointestinal symptoms, such as diarrhea, may be one potential contributing factor. Gut bacteria play a major role in neurological development, and the microbial composition of the gastrointestinal tract is associated with mental health and cognitive development. “In these studies, our vaccines were administered around the time that the mice are born, so I think it’s reasonable to say that the answer lies in the gut,” Lowry told CNN. “More studies are needed to understand how vaccines may alter the microbiome and the downstream consequences of these changes.” For now, Lowry said that much more research is needed to understand how these vaccines may contribute to the development of psychiatric disorders. “The long-term effects of vaccines are an area of intense public interest, and there’s substantial concern about the potential risks. We are finding that vaccines, though
