Saving an image in Photoshop is easy. Just open the image and choose File⇒Save to create a new image in either a.psd or.psdx format. Saving files When creating a new file in Photoshop, you always have the option to save the file as a.psd or.psdx file.

A.psd file is a native Photoshop file format that contains all the information needed to edit your image. A.psdx file is a Photoshop Extension file. In many situations, you can use the same files in other image-editing programs. However, to use the same image in different programs, you'll need to use a file format that the program understands, such as the native.psd or.psdx files. Why PSD? What is the purpose of the PSD? As previously stated, the.psd file format allows you to edit a Photoshop image without leaving the Photoshop program. It's very similar to the proprietary Photoshop Interchange File Format or Photoshop Workflow File Format, which are also native Photoshop file formats. A.psd file is a better file format for image editing, as it provides much more detail about the edit than a.pwd or.pwa file. However, you can create a.pwd or.pwa file just as easily as a.psd file. You can get around the.psd file limitations by using a.psdx file, which is a Photoshop Extension file. In addition to the native edits of the.psd file format, the.psdx file allows you to export the file to other programs, including other Adobe products, as well as programs that don't support the.psd or.psdx file formats. However, the.psdx file format can be limited. If you export a.psdx file to another program, the file could lose some of its editing capabilities. For example, when you export a.psdx file to another program, the app doesn't recognize the.psdx file as a native Photoshop file. In other words, you cannot alter or make additions to the file in the other application. In Figure 9-1, a.psd file (left) and a.psdx file (right) are shown. Notice the difference between the two formats. The.psdx file is not as detailed as the

Watch the Recording The Book of Life The Book of Life is an opera (fandango) in two acts composed by the American composer Jack Beeson. The libretto by Jonathan Biss was written with the help of Jean Leighton, a resident of Florence, Italy and editor of the Florence Review. It is based on the Book of Life chapters present in the four Gospels of the Christian Bible. The first performance was held in Florence on March 6, 1987 by Opera Lione, conducted by Gabriele Vio. It is one of the few operas based on the Book of Life in the Bible that has no libretto in the traditional sense, having been translated from the Italian (again by Jonathan Biss). Beeson's opera is in two acts. The first act is called "The Beginning", and the second "The Ending". The first act consists of fifteen numbered sections, each representing a Gospel in the Bible. The opera has ten arias and a chorus of six choral singers, with an Italian translation by Giovanni Pinto. This is the only opera composed by Beeson that is not scored for any combination of orchestra and instrumental ensemble. (Though An American Requiem is scored for a chamber ensemble.)**) HeLa cells expressing either a control GFP-LacI or a GFP-LacI-8NG construct were immunolabeled for GFP and His-LacI. For the control cells, the triple colocalization of GFP, His-LacI and GFP-LacI is shown in the overlay image. In the case of GFP-LacI-8NG cells, the formation of granules positive for GFP-LacI and His-LacI is visible in the overlay image. The insets show a magnified view of the cellular region indicated with white boxes in the merged images. Images are representative of more than four independent experiments. Scale bar: 10 μ m. Endogenous GFP-LacI Is Degraded in the Cytoplasm after Proteasome Inactivation {#sec3.5} ----- We found that transient expression of GFP-LacI-8NG fusion, but not GFP-LacI, resulted in the formation of cytoplasmic aggregates in RPE1 cells ([Figure 1](#fig1){ref-type="fig"})D
