Q: Index out of bounds when reading small array from large array in binary format I am reading a large binary file in binary format with the code below: `val = get_val(loadfile)` where `loadfile` is a file stored as an array of characters. In `loadfile` I have this: `3:A TTTTT 4:B TTTTT 5:C TTTTT` In `val` I would like to get the number of 3's (TTTT's), 4's (TTTT's) and 5's (TTTT's) But if I attempt to read from a number larger than the number of elements in `loadfile` I get a `IndexError: tuple index out of bounds` I also tried using a list like: `val = []` for `i in range(0,len(loadfile))`: `val.append(loadfile[i])` but I get the same error. This is a problem because I need to compare `loadfile` with `val` for an equality check. How can I get the index of the number of 3's, 4's and 5's?

A: We can convert a string to an array of strings in Python with `string.split`: The `split()` method returns a list whose elements are the splitting occurrences of a string. All occurrences are returned as a single element array. The splitting string can be an empty string, in which case a single element array is returned for each original string. If the separator is a regular expression then all matched parts are returned as elements of the array.

```
# Let's read a file
f = open(filename, 'rb')
# We can use `list` for reading binary files
raw_data = list(f)
```

QuickTune is an easy to use, keys-only utility written to help new guitarists learn how to properly tune their instrument, or to simply serve as a reference for more experienced players. To use it, simply press the 1-6 keys at the top of your keyboard, then tune the corresponding string until the sounds match; your instrument will now be tuned in the key of C Major. Briefly put, QuickTune will help users improve their skills without any hassle or complicated lessons.

I just want to know if I can use it for commercial purposes or not. I don't understand why they don't provide "public domain" option. It's not like there are no alternatives and it's free. (To be fair, I'm not a lawyer, so maybe someone will explain me why it's free.) Ademoetris wrote: Bonnarens wrote: Are you sure it is not the public domain? Maybe it's just that "for free" doesn't mean "for free". The license is not a simple "free". In the license, the author mentions "recover the costs", although it's not explained in the license what "costs" are. Also, as the author suggests himself, he offers to give advice if "you want to make money out of it". So, the license allows you to "make money out of it", which is not free. If the free part means "no value of money" (i.e. open source), than the author is not very helpful. If the free part means "for free", then the author is a liar. If the free part means "no value of money" and the "no value of money" part is the cost of the author, than the author is a hero. So I conclude that the author is just lying and does not want to help people. Ademoetris wrote: Bonnarens wrote: I didn't read the license.
