What's New In?

------------------------------------- * An end-user tool (based on a desktop client) designed to be installed on Remote System Monitor Server and which will display detailed graphs and lists regarding the currently running processes, CPU usage, network information or temperature and free space on the hard disk. * This version of Remote System Monitor Server has been created to be suitable for all operating systems (Windows, Linux, Mac OS X) and offers a real time clock, which displays the UTC time in 12-hour format and provides the option of displaying the system time in the local time zone. HOW TO INSTALL: --------------- 1. Connect the blackberry or android handset to the computer via USB cable. 2. Turn on Remote System Monitor Server. A window will appear with the device name (if connected to a Windows machine) or the ip address of the device (if connected to a Mac or Linux machine). 3. Go to and log in with your Remote System Monitor account details. 4. Press [Search] and type the name of the device or ip address. The summary and the detailed information will appear. 5. Press the [Exit] button to close the app. 6. If further information about the device is required, press the [Connect] button. NOTE: This tool also works on Blackberry with the Remote App being installed on the device. On Blackberry, Remote System Monitor will connect to the application via a web server instead of a direct web connection. CONFIGURATION: -------------- Remote System Monitor Server can be configured to display information for multiple devices. This is achieved by creating a new remote domain which will be used to connect each device to the remote server. For more information, refer to the configuration section in the manual. WHAT THE USERS SAY ABOUT Remote System Monitor Server: -- - I'm going to buy Remote System Monitor Server. It's a very good app. [Thank you for the app] [I use it to monitor my phone and check its temperature and free space] - I used to use an utility called Sweeper, which helped me to monitor my phone. I found Remote System Monitor Server to be more efficient. [This tool helps me to have control of my phone and if there is something wrong, I can fix it] - It is true that it is possible to have fun with Remote System Monitor, but also when you use it to check applications statistics like CPU usage
