Photoshop 2021 (version 22) [April-2022]

(a) Field of the Invention The present invention relates to a terminal fitting. More specifically, the present invention relates to a terminal fitting having a main body and a mating hole in a cap, the terminal fitting including a fitting piece which is inserted into the mating hole of the cap and is held on the cap and a locking piece which is inserted into an insertion hole formed in the main body and is held on the main body. (b) Description of the Prior Art Terminal fittings of the type described above are used for a power supply or the like. Such terminal fittings are required to be watertight and dustproof. Japanese Patent laid-open Publication No. 53-115033 discloses a terminal fitting of this type in which a cylindrical main body has a watertight lumen in its central portion and the main body has an annular stopper which covers an upper end opening of the cylindrical main body. A skirt-shaped cap is crimped on the top of the cylindrical main body and the cap has a through hole extending through its central portion. The terminal fitting thus constructed has the advantage that, even if water enters the lumen, the water cannot rise to reach the annular stopper since the annular stopper covers the upper end opening. In addition, the annular stopper has elasticity, so the terminal fitting has the further advantage that even if a gap is formed between the cap and the cylindrical main body due to a crimping error, the water does not easily rise further. However, the terminal fitting disclosed in the Japanese Patent laid-open publication is disadvantageous in that the skirt-shaped cap is not air-tight and dust is likely to enter the terminal fitting because the cap covers the through hole formed in the central portion of the cylindrical main body and the through hole is exposed. Further, the terminal fitting is disadvantageous in that when the terminal fitting is connected to a mating terminal fitting, a crimping error often occurs because the terminal fitting is crimped on the mating terminal fitting by a crimping tool having a smooth or frilly end. The present invention has been achieved in view of the above-described circumstances and it is therefore an object of the present invention to provide a watertight terminal fitting with a small size and high reliability.Q: How to get the value of a parameter like -I in the web.config of an asp.net web app In the web.
