A free program that allows its users to create RTF documents with all the formatting options, fonts and tags they choose. The program offers an intuitive graphical user interface, with an easily approachable navigation bar; the only relevant prerequisite is that its users have access to the Internet. Once the required setup is done, you can immediately open a new document to begin creating the layout you require. Here you'll be able to choose and manipulate the setup options, before going on to create your new document. Of course, because the document is a template, its users can easily edit it and change its layout by updating the values and changing the font, color and boldness. What's more, the program supports the creation of documents with special security elements. Since this is a free software, its users are entitled to make changes to the document at any time, keep or distribute it, and even edit it as much as they need. Finally, when the tasks are done, a new document is created with all the modifications and is ready to be printed, shared with others, or sent as a file. Tutorials and help: If you're facing problems with using this free app or have questions that require answers, you can get in touch with its web-based customer support team. A simple program that will generate an HTML document with no formatting options, only the HTML syntax. The only relevant prerequisite here is that its users have access to the Internet. Once done, the document is displayed and saved into a file. You can also edit it to make changes to the text or its structure, but this option is not available right away. Moreover, you can use the program to check the syntax of your document in an online interpreter. The program also allows you to edit the document directly, and this is a feature that can be of great help for those who find it hard to create a new document by using the HTML maker. However, this is not the only attribute this program features. Indeed, its users can also edit the HTML document and add any information they wish to include, such as headers, footers and images, before saving it. They can also simply export the document and make it available on a website. As a precautionary measure, the program is a free, safe and secure online tool, and although you can make changes to your document directly, you cannot alter its text or structure. 09e8f5149f
