The four-finned amazon lungfish (Coelodus leuciscus) is a large, air-breathing, freshwater fish. This fish is often confused with the more primitive lungfish, which is one of the closest living relatives. Unlike its primitive lungfish ancestors, the four-finned amazon lungfish has a pair of fleshy fins on either side of its snout, which it uses to scoop food from the water's surface and to steer. The fish is listed on the IUCN Red List as Data Deficient due to the limited knowledge of its biology. IUCN Red List Category: Data Deficient Category: Subterranean Gymnotiformes Category: Lobefins Category:Fish of South America Category:Freshwater fish of Brazil Category:Freshwater fish of Uruguay Category:Taxa named by Carl Linnaeus Category:Fish described in 1758 } /** * Creates a new {@link PyEnvironment}. * * @return a new {@link PyEnvironment} */ public static PyEnvironment create() { return new PyEnvironment(); } private PyEnvironment() { } /** * Returns an {@link Object} representing the Python {@code __del__} * method for the current instance.
