Q: UITableViewCell works in simulator but not on device I have created an app with custom cells by following the apple developer guide (Part 1 of the link). After creating the app, everything works fine in the simulator. But when I attempt to load the app on my iPhone I get a blank screen and a "no content found". I am using the same template code as in the guide. I have set the "Clear Cache" and "Clear Data" for Xcode. Any idea how to get the simulator and device to show the cells correctly? A: If the problem persists I suggest you to read this, it solved my problem. This article shows how to improve your memory through self awareness, This article has 4 version: Coffee helps to improve brain power Coffee will give you your best jolt! Whether it's on the job or off, coffee can help you to think more clearly. Let's review: People who drink coffee have shown to have greater cognitive function than people who don't. People who drink a lot of coffee report better concentration and a feeling of overall energy when they are awake. Coffee affects neurotransmitters in the brain which affect mental activity. Coffee contains caffeic acid, Theophylline, Thymol, and Phenolic compounds. Coffee has been associated with benefiting brain performance through several mechanisms. The most notable being the stimulation of the central nervous system (CNS). Coffee contains caffeine which is responsible for caffeine induced arousal. Caffeine is probably the most important factor in why you are more alert after consuming a cup of coffee. There are studies that have shown that caffeine increases the release of L-Theanine, which is known to relax people without causing drowsiness, and adenosine, which is a neurotransmitter that has been shown to boost memory. Caffeine also works by directly increasing levels of dopamine in the brain. Dopamine is a neurotransmitter that affects brain functions such as learning, working memory, and making decisions. It also works by influencing the action of dopamine receptors in the brain. Other studies have indicated that coffee can also help people to focus and stay alert longer than coffee drinkers who did not drink coffee. A study performed by Harvard University found that caffeine helps the brain to perform better on cognitive tests

To copy pixels from the surrounding area of the image and paste them to the selected area, select a small portion of the surrounding area and click the arrows near the arrow head on the tool. 8. 8. To add a new layer of the selected area, press the Add Layer icon at the bottom of the Layers Panel. ## 17.3 Brightness and Contrast The tools provided in Photoshop allow for adjustment of the image brightness or contrast. In Photoshop, you can alter contrast using the levels (View Menu), tonal curves (Colors Panel), or Levels and Curves (Image Menu). The most common adjustment techniques involve using the "levels" command or the "tonal curves" commands. Brightness can be adjusted using the "levels" command. From an image that is slightly too dark, we can make it brighter. In Photoshop, when adjusting the brightness, we generally want to raise the histogram and make the data point in the darkest shadows more visible. If we want to lower the brightness, we need to lower the histogram so that the shadow portions of the image become lighter.
