The sentence is: I will sell you the land which I hope will bring me riches. Does it mean "I will sell you the land that I hope will bring me riches"? A: You could use the word hope in your sentence. It is an opinion word. I will sell you the land which I hope will bring me riches. In this case I think the sentence is not correct as it does not make sense. In your original sentence, the word "hopes" means a feeling that something will happen. I will sell you the land which I hope will bring me riches. Keymacro is an app that enables you to assign shortcuts to several keys on your keyboard so that you can save time and effort while typing and avoid mistakes. Unlike other programs of this type, Keymacro is designed to work with keyboards of any type (QWERTY, AZERTY, FKBD, Dvorak) and also with tablets. What makes it special is that you can assign key combinations to all the available keys on your keyboard and even to any virtual key of a tablet, be it an iPhone, iPad, or an Android tablet. Keymacro will ask you to choose the desired key combination in the 'Shortcuts' tab of its main window, and it will then assign it to your current keyboard layout, meaning that you will be able to use it immediately. Keymacro can be used to set up several shortcuts at the same time, but you can also set them one by one. However, there is a limitation, which is that only two at a time can be used simultaneously. In the 'Shortcuts' tab, you will be able to modify the following parameters: - Name: you will be able to change the name of the shortcut you created, for instance 'F6' can be called 'Compile' and 'F9' can be called 'Toggle Build'. - Keyboard Modifiers: these will refer to the extra keys that should be included when you press the assigned shortcut, for instance when 'Compile' is assigned, a 'c' key will be included so that when you press it, you will activate the 'Compile' shortcut. - Shortcut: this refers to the actual shortcut, it has to be done in the form of F7 for instance, which stands for the 'Execute' command. - Keyboard layout: this indicates whether the shortcut will be assigned to a key of the current keyboard layout or of a specific one, for instance if you are using an English keyboard, but you want to set up the 'Execute' shortcut to the German layout (F7), you will simply add a 'g' key, something you could not do in a QWERTY keyboard. KEYMACRO does not use the 'Symbols' tab. This tab can be found under the 'Settings' section, and it is there where you can add any custom keyboard symbol you want, even ones that may not be available in a given keyboard layout.
