How Photoshop Works The Photoshop tool is a vector-based image editor that makes it easy to manipulate, colorize, and layer images. It features a workspace that allows you to duplicate objects, move them around, resize them, and manipulate their transparency. Each tool works with a rectangular box (aka. the active window or canvas) and will display a preview of the image while editing. The workspace, named the Layers palette, allows you to make use of multiple layers and customize the appearance of your work. When using Photoshop, you can drag objects from one place to another within a layer, or move layers into other layers. You can also group, lock, fill, and empty layers. In addition to the tools used for the basic editing tasks, Adobe offers advanced features like Liquify tools and the Content-Aware Move tool. Adobe Photoshop CC Adobe Photoshop CC contains the updated tools and features of Adobe Photoshop CS6. When you use the software, you will be able to see that the interface has been changed to match the new features. Additionally, in previous versions of the software, you could open and save files in a different file format, so if you're used to saving files in the PSD (Photoshop Document) format, you can use Photoshop CS6 to create and save files in the new PSDx format. Contents: Adobe Photoshop Elements Adobe Photoshop Elements is the counterpart to the professional software; it is known for its simplicity. Adobe Photoshop Elements creates a single document for a single image. This allows the user to work on a single file and the changes to the image will automatically adjust itself across the entire document. In addition to the ability to save your work in PSDx format, Photoshop Elements can be used as a free alternative to the professional software. It is available for the Windows OS, and Mac OS X. Adobe Photoshop CC & CS6 Adobe Photoshop CC includes the updated tools and features of the professional software. It can save files in the PSDx format. Adobe Photoshop CS6 is the updated version of Adobe Photoshop CS5. The software can save files in the PSDx format. It is available for Windows, Mac OS X, and Linux. (Photo: Photostock / Ilya Nayman) How would you like to walk up to the bank teller and discover that your social security number has been printed onto a prepaid Visa card? Could you detect the phony card just by perusing a row of phony Visa cards? Of course you could. Researchers at the U.S. Army Research Institute of Environmental Medicine, the United States Naval Medical Research Center, and Johns Hopkins University in Baltimore, along with more than 200 scientists and engineers from over 100 organizations, have published an important scientific paper in this week's Proceedings of the National Academy of Sciences (PNAS) to demonstrate how powerfully the human brain can detect counterfeit products and detect fakes even when we are not consciously aware of it. The paper's authors, who studied 200 people in Israel, published in PNAS, are described as "cognitive anthropologists," which makes me think that their writings should probably be reviewed by an anthropologist to be sure that they are accurate and unbiased. A composite of a fire near Simferopol, Ukraine, July 16, 2014. (Photo: Photostock / Ilya Nayman) For this particular study, the researchers presented people with fake products, such as prepaid visa and credit cards, that looked exactly like the real thing — the same logo, brand, and everything else — except that all the personal information was either fake or different from the real thing. Then the researchers tracked brain activity as the people thought about the products, including whether they were real or fake. Afterward, they measured the accuracy of their judgments. If you look at the composite image at the top of this column, you can see what I mean. Look at the Visa logo. The information printed on that card looks exactly like that on real Visa cards. It even looks like real-looking numbers. Look at the court card, below. Even though the card's information does not look like a real court card, people are very good at detecting that it is a fake. You can see that people were able to detect fakes of Visa cards even if the cards looked exactly like the real thing — even if a person never had any previous experience with Visa cards. Now look at the fake versions of the court card. It looks exactly like a real court card, right down to the
