vendor/gems. When I do $ cap production bundle exec rake tasks, it complains that none of my own dependencies are installed: Exception Message: Could not find gem'minitest (~> 5.5.0) x86-mingw32' in the gems It's because the gem has its dependencies installed into vendor/gems. How can I make Capybara and other gems in vendor/gems self-contained so that dependencies aren't installed into vendor/gems? A: I'm not sure if this is possible, but after installing all gems into vendor/gems manually, I ran bundle install and bundle config --global to rebuild my Gemfile.lock from scratch, and it seems to be working. I'm hoping that, someday, Bundler will figure out this trick. Q: How to convert strings to floats in python? [Frequency and morphology of the neocortical distribution of lossy/forward-masked visual information. 2. Distribution of neocortical dysfunction]. Disturbances of cerebral functions are

localized in specific areas of the cerebral cortex which are closely related to specific functions. However, knowledge about the frequency and the morphology of such localized abnormalities is still limited. In order to demonstrate the frequency and distribution of such abnormalities, we conducted a detailed comparative analysis of age related temporal lobe epilepsy and temporal lobe dementia in combination with -non-epileptoid-foreseeable temporal lobe lesions. We quantified the frequency of these lesions in a large study group and analyzed the topography of cortical vulnerability in the temporal lobes. In epilepsy, temporo-lateral lesions are much more frequent in the superior temporal gyrus than in the middle temporal gyrus and the anterior temporal gyrus; temporo-medial lesions are found in comparable frequencies in each of these three areas. In dementia, lesions are usually seen in the temporal poles, but the occurrence of damage in the superior temporal gyrus is as high as in epilepsy. The fronto-temporal topography of the lesions seen in epilepsy is reversed, so that frontal and anterior limbic processes are the most prone to damage. There are differences in the morphology of the abnormalities

between epilepsy and dementia. In temporal lobe epilepsy, lesions usually surround the individual gyri and can be restricted to one area. In dementia, lesions often disperse over several gyri.Q: How to create a generic type that takes anything that is convertible to some an interface (its specification) I want to create a generic type with such interface specification: public interface Searchable { /** * List that are sorted by data's field * @return */ default List searchList() { return this.this.items.stream().sorted(Comparator.comparing(SearchableItem::getData)).collect(Collectors.toList()); } /** * When returns true, then this.items are sorted by data's field * @return */ default boolean isSearchListSorted() { return this.this
