The BETA 2.0 Release of Autodesk AutoCAD Product Key – The Day-to-Day Use of an AutoCAD Freelance Introduction Since I first started freelancing, I've used a combination of screen-based and pen/paper methods to create and document architectural design documents. While I enjoy having the CAD app at my disposal, I also like to use more of a traditional design approach at times for a variety of reasons. Today, I'll discuss my workflow and the pros and cons of each. One thing to note: The tools, skills, and materials I discuss here are available to most design-related freelancers, and perhaps even some people who just want to improve their 2D drafting skills. They won't make you a great architect or a rockstar carpenter, but if you're looking for some practice, a step in the right direction, or inspiration to make your own changes to the ideas I discuss here, then keep reading. The BETA 2.0 Release of Autodesk AutoCAD – The Tools, Skills, and Materials You Need to Know Conventional 2D Drawing - Paper and Pen One of the biggest advantages to using a traditional CAD system is that it allows for the possibility of non-digital editing tools. If a design error is found during the digital drafting process, it can easily be fixed or modified with a pen, a ruler, a straight edge, or a combination of tools. All of these tools are easily attainable in most any office environment. The main disadvantage to non-digital methods is that you need to be proficient at using one of these traditional tools in order to create a design that can be digitized. Vector Graphics Creation Vector graphics are comprised of a series of lines. Creating and editing vectors can be done on a computer using a combination of screen-based software and the graphics tablet. As the creation of these graphics is done by tracing shapes with a pen or finger, the designs are far less susceptible to making minor mistakes, but are harder to edit after the graphic is complete. This does mean that the design process is slower than with traditional methods, but that's the tradeoff of using a conventional system. Not everyone will be familiar with vector

graphics creation. Those who already know the basics can go straight into the digitization process to create a design. Learning how to create vectors can take years, so I recommend you start now, even if
