In this article, we'll use Blender to create 3D models of elements of the UI for AutoCAD. We'll use Blender's built-in screen capture tool and screen recording tool to capture what we're doing, export the images as JPG files, and open those files as 2D background elements in Photoshop. Immunophenotypic differences among T-cell subsets have been reported in children undergoing marrow transplantation (BMT). Little is known about the effect of pre-transplantation T-cell subsets on clinical outcome. We investigated the relationships between T-cell subsets and clinical outcome in children undergoing BMT. Mononuclear cells obtained from marrow samples were assessed by flow cytometry to determine the percentage of CD2, CD4, CD8, CD3, CD4+CD45RA, CD4+CD45RO, CD8+CD45RA, CD8+CD45RO, CD4+CD45RA+CD45RO+, CD4+CD45RA+CD45RO-, CD4+CD45RA-CD45RO+, CD8+CD45RA-CD45RO+ and CD4-CD45RO+ cells. In all, 61 children who underwent allogeneic BMT in our institute from 1988 to 1997 were enrolled in the study. The clinical data were reviewed retrospectively. The majority of patients had severe aplastic anemia (59%). The median follow-up period was 713 days. The mean survival time of patients was 366 days. Significant differences in T-cell subsets were observed between patients with non-relapse deaths (NR
