For example, in a Word document, hyperlinks can be activated from a table cell. Raster images and vector images can be merged and manipulated. Text can be modified such as font size, style, color, background, and text wrap. Text can be rewrapped, and can be vertically, horizontally, or both. Text can be edited. Text can be typed directly into the interface, or edited with a keyboard input editor. Text can be selected (all or portions of it) and copied. Text can be deleted from a drawing. Text can be saved and loaded from and to text formats such as RTF, HTML, ASCII, PostScript, and others. Scripting. In an engineering environment, engineering drawings are often associated with data. For example, when a component (such as a piston, valve, or piston ring) is placed on a drawing, the drawing can be associated with engineering data to document the components that will be used with that drawing. These data can be captured in a text-based file, such as an XML file,

and loaded into the drawing. Scripting allows users to automate this process. Scripts can be written in a variety of languages including, but not limited to, AutoLISP, VBScript, and Visual Basic for Applications (VBA). In 2019, Autodesk released AutoCAD Cracked Version 2019. User interface AutoCAD has three main user interface areas: View, which is the area where the user creates, modifies, and views drawings. Drawing tools, which are the various tools that are used to modify the drawing in the View area. The Properties tool, which is used to manage and automate the properties of objects in the drawing.
