Command-line and scripting AutoCAD supports a command-line interpreter, which can be used for tasks such as batch processing and batch scripting. The creation of a stand-alone application is supported via the COM/COM+ automation interface. AutoCAD can be controlled via scripting languages such as AutoLISP. Many of the AutoLISP components are integrated into AutoCAD and AutoLISP (AutoLISP) itself is based on the C++ Class Library. The script language has been reworked with the new .NET Framework to create a new AutoCAD-centric version called ObjectARX, which is based on the ObjectARX C++ Class Library. The scripting functionality can be used to automate almost anything within AutoCAD, making it very easy to create batch scripts or macros that perform repetitive tasks. Since the release of AutoCAD 2012, AutoLISP has become part of the .NET Framework and AutoCAD can be controlled via scripting languages such as AutoLISP. This scripting interface can be used to automate almost anything within AutoCAD, making it very easy to create batch scripts or macros that perform repetitive tasks. In addition to the command-line interpreter, there are also command-line tools that can be executed on a console or from a batch file. The command-line tools can be used for tasks such as batch processing and batch scripting. The use of command-line tools to automate work flows and procedures has been increasing since the release of AutoCAD 2002. The command-line tools can also be used to automate tasks within AutoCAD.
