Field of the Invention The present invention generally relates to a high voltage power supply circuit and a charging circuit, and more particularly to a high voltage power supply circuit and a charging circuit that are capable of improving the reliability of a high voltage boosting circuit. 2. Description of Related Art In a conventional image display, in order to generate voltage having a relatively high voltage, a high voltage power supply circuit is usually configured on a motherboard. Under certain operating conditions, an internal high voltage power supply may be damaged due to a relatively high voltage.

Therefore, a conventional motherboard generally has a function to detect a high voltage. If the voltage is detected as high, the high voltage power supply circuit is shut down. However, the function to detect a high voltage is set to control the switching between the high voltage power supply circuit and a low voltage power supply circuit. That is, when the switching between the high voltage power supply circuit and the low voltage power supply circuit is switched off, the voltage of the high voltage power supply circuit is not detected by the function. Therefore, it is possible that the high voltage power supply circuit is in a working state and thus the high voltage power supply circuit cannot be shut down.Q: Update multiple fields to NULL when joined on multiple tables I have the following query UPDATE Table1 t1 JOIN Table2 t2 ON t1.ID = t2.ID JOIN Table3 t3 ON t1.ID = t3.ID SET t1.VALUE = NULL, t2.VALUE = NULL, t3.VALUE = NULL WHERE t1.ID = 'foo' AND t2.ID = 'bar' AND t3.ID = '
