Story Gameplay Graphics They were born from the dark age, people that could only hope for death. The ability to escape death was the reason that the gods of the dark age had descended from the heavens. For the gods of the dark age, people that had never seen death could not comprehend existence; and in the hearts of many, the mystery of life and the fear of death became one. However, this was the world as it was born, and out of this world arose the dark age. The creatures that were born of this world were born of the darkness and through their fears gained a consciousness. Forced into the darkness of the dark age, all of the people that could not comprehend the unknown became people that were equally born of the darkness. At the time, there was no hope. Everyone knew that there was nothing beyond death, no matter what they believed in. However, they also knew that they could not die and that was the only thing that gave their existence meaning. They were also confused. A hundred years later, the main reason that they lived was that they did not know what would happen beyond death. Nobody had experienced such suffering, and for that reason it was unknown to everyone. And thus, the world lived in a world that was created through people that had lost all hope. The boys and girls who were born in that world were the first people to experience the darkness

of the dark age. In the darkness of that world, the children were raised by the darkness in the womb of their mothers. Once they were born, the darkness became their life, and the light that entered into them was extinguished. Afterward, these children lived without hope. This is the original world that has been flowing for a hundred years and it is as beautiful as a dream. It is a world that touches on your hopes, desires, and longings. However, this is a world that is like a dream. There is a possibility that you will awaken from a dream without its happiness, but it is not without a deep happiness. This is a game with a story that is fundamentally different from other games. You might have heard about the uncertainty of life, but have you ever heard of the darkness of the dark age? The game centers on a world that is a dream, and it is bff6bb2d33

_m\])\]. While we expect the membrane modes to be the only ones behaving properly in regimes where $N_s\gg1$, we must check that this is actually so in the presence of the disorder; this can be done without much effort by starting from the Hamiltonian (\[_hdef_m\]). We already noticed that modes out of the bulk angular wave vector space have linear dispersion and as such their interplay with disorder arises only from translation symmetry breaking. Namely, disorder (i) leads to L-local self-energy terms in the Kubo formula (\[_deltaSxx_m\]) and (ii) to a local scattering channel mixing the different L modes. One can see that disorder mixes m only with $m\pm1$ modes, effectively limiting the number of disorder channels to $L/2$ instead of L. Thus, in regimes where $N_s\gg1$, the disorder only mixes m with $-m$. As a result, even though the effective Hamiltonian H_m is on a lattice, the linear superposition principle holds and
