* The Graphics Exchange Mailing List (GEML) on Yahoo! has hundreds of Photoshop discussions spanning the gamut of design questions and problems. If you have a question about Photoshop, you will most likely find it there. If you don't find the answer for the problem you have, try posting a question to the GEML and see if you get a response. * The Photoshop Zone Forums on Yahoo! contain hundreds of questions about Photoshop. If you can't find your answer on the GMLE, try checking out the forums. ## Photoshop Training Photoshop has a few training courses, and I can't recommend them highly enough. In addition to the many online courses and tutorials, Photoshop has a set of DVDs that will show you how to use Photoshop, along with a training manual on disk. Another great tool is Photoshop Zone. Photoshop Zone (www.photoshopzone.com) is a company that sells online tutorials for Photoshop. Since they have the Photoshop operating system, they can access and teach you about Photoshop's features directly, without having to purchase a course or two. They also sell an add-on to your existing Photoshop course (either online or on DVD) that covers importing photos and Photoshop for beginners. ## Final Thoughts on Photoshop I strongly recommend Adobe Photoshop as your tool of choice for any and all image manipulation needs. While it may be considered a "trick" tool by some, it is the standard that most designers use to prepare images for the Web or for print, and it is a tool that cannot be overly simplified, as some Photoshop-only beginners assume. # Chapter 14 The Importance of Image Design So far, we've discussed some of the web design basics, from understanding colors and contrast to layouts. Now we'll be focusing on the importance of image design, a concept I

like to call creating the "strongest image." We'll start by considering the definition of an image. ## What Does an Image Design Mean? This is just another one of those topics where you are going to hear us talk about it a million times and it's going to sound like a nice idea, but actually nothing happens when we talk about it. So you need to know that we're not trying to imply anything is going to happen with an image. All we're doing is taking a look at what makes up an image and what attributes might be important to keeping something strong. So

Q: how to auto resize image in uiscrollview in iphone sdk? I have a uiscrollview which loads 200 images from the web service, and I have to display them in vertical scroll view. here is the code I have written for it: NSData *imageData = [NSData dataWithContentsOfURL:url]; imageData is a NSData object containing image data and imageView is the UIScrollView. how can I auto resize the size of the images by keeping them in imageData? A:

Its easy as that, just do this: NSData *imageData = [NSData dataWithContentsOfURL:url]; UIImage *image=[UIImage imageData]; // in these lines, size of the image is assigned to // variable sizeOfImage.

```
UIGraphicsBeginImageContext(CGSizeMake(sizeOfImage.width,
sizeOfImage.height)); [image drawInRect:CGRectMake(0, 0,
sizeOfImage.width, sizeOfImage.height)]; UIImage *newImage =
UIGraphicsGetImageFromCurrentImageContext(); // Here we just
get the data of the image that has just been drawn into // the context
and then display it. UIGraphicsEndImageContext(); // we will use this
picture in the next step UIImage *scaledImage = [UIImage
imageWithCGImage:newImage.CGImage]; Now add this
scaledImage to the scroll view. self.scrollView.contentSize =
CGSizeMake(sizeOfImage.width, sizeOfImage.height);
self.scrollView.frame = CGRectMake(0, 0,
self.view.frame.size.width, self.view.frame.size.height -
sizeOfImage.height); [self.scrollView addSubview: self.view];
```

```
[self.view addSubview: self.scrollView]; Q: How to create clickable

Q: Should I use `setText()` on a `TextView` before calling `setSelected()`, `onClick()`, or both? I'm wondering about the proper use of `TextView` methods in Android programming. The documentation states:

Important: For a given `TextView` instance, only one of `setText()` and `setSelected(int)` will be called, at most once per Activity lifecycle. If I set the `TextView` text in the `onCreate()` method of an Activity, should I include `setSelected()`? Or would it be ok to do that in an `onClick()` method? I'm specifically talking about instances of the Activity class. But is it ok to call `setText()` inside an Adapter class?

A: The answer depends on the situation. Android recommends use the first way, but if you want some more control over the state, you can use `setSelected(int)` directly. For the second question, I don't think you need to set a default value for your selected item. From my point of view, you can check the state in `onCreate()` and the user will be asked if the position is selected. And in `onResume()` and `onPause()` you can reset the state to the default value. I recommend you to read the `selected()` method reference. So, it depends on your situation, use what you need. Also you can have set the clicked Item/position by using the `onItemClickListener()` method as a click listener.

Q: When a path in a dynamic linked library is reached, the function is not found? I have a dynamic linked library and a simple application, which I am working with. This is my dynamic linked library (libmenu_d.so):

```
#include #include void foo(); void foo(){  
printf("hello world"); }  
When my app calls: dlopen("libmenu_d.so",
```

RTLD_LAZY); foo(); the program dies, presumably because foo() is not found within the loaded library. However, if I instead call: foo(); the program immediately prints "hello world". Why is the foo() not resolved within the loaded library? A: In your case, the foo function is statically linked to the application, and you call
