"So many new features are being introduced to the sport in FIFA 22, from gameplay innovation to improved AI, the addition of 3D viewers and player avatars and even the introduction of PlayFab where you can trade and play with your favorite player on the pitch," said Alex Wild, vice president and general manager, EA SPORTS Division. "These new features create an environment that truly allows for the best of the best to show off their skills and prove their worth. Our fans around the world will be the ultimate judges and ultimate winners." FIFA 22 introduces an all-new set of rules and tactics to catch and complete passes, tackle opponents and speed up attacks, among many other tactical aspects like Kick Dribble, through an all-new system of intelligent, dynamic commands. Through the new command-based system, FIFA 22 makes it easier for players to think on their feet and react faster than ever before. For example, when a player receives the ball inside his own penalty area, the intelligent commands will automatically command a set of set plays that can be executed, depending on what the game situation dictates. All players can now perform a specific action on the ball by using contextual commands that appear on the screen for players to execute in specific situations, with familiar, classic moves, like a back-heel action or a close control, with precision and accuracy. New contextual commands can also be found by tapping on the R2 button, enabling an exhaustive set of contextual commands to be used. In addition, with a new dribble system FIFA 22 will recognize and replicate the direction of a player's movement through the use of audio cues and contextual commands on the ball. FIFA 22 introduces a new creation system, PlayFab, which allows users to create their own players, manage their game teams, showcase their skills and even trade players and cards with other users. Creating a player in PlayFab is like creating a character in Mass Effect. Players even have their own physical and visual appearances, along with custom skills. Players can also register for tournaments, earn in-game titles, win cash prizes, manage their player budget and even sponsor their own players. PlayFab players can add-on their player skills, through the use of 'Packs,' into their custom player, who then they can use within the game. A new 3D view, which looks like you're right on the pitch, can be accessed through the

Features Key:

- New Style of Play - You define the pace of the game, you decide what tactics to employ and how you want to compete. Adapt to your opponents, change the way you like the ball to be delivered and deny it. Get there. Go places you've only dreamed of.
- Skill Moves - Get closer to the ball with dribbling, shooting and passing. Expanded aeriels also make aerial moves even more effective. Earn Defending Bonus which can let you score headed through balls or win penalty shootouts.
- More Changes Up Front - New set of attacking mechanics gives you more control over the direction of your crosses. Hamsik is the master of right- and left-sided crosses while Firmino is your friendly Brazilian PM.
- More Auras - Enhanced gameplay helps you read the game better to make those killer passes, dives and counters.
- More Skill Moves - New multi-effort passes let you deliver your shot accurately, using the ball's momentum to shift it in the desired direction.
- New Offside System - Now you get to decide if your teammate is able to score by drawing the opposition's offside trap. Offside traps are delayed to create more space for the defense to recover.
- Extra Challenges - Play the way you want to compete. In FIFA Ultimate Team you have the control to make the most of any challenge in-game.
- New camera position and shot animations - New camera position gives you more options in how you deal with the ball, whether you're finding the right pass, hitting the sweet spot or curling the ball into the top corner.
- New Goalkeeper animations - New goalie animations allow strikers to confidently serve and adapt to shots from all angles.
- Progress your player's attributes - Make your player better, more accurate and faster. Nike Generation has never been so important, with more takers of kicks and header touch, and more accurate through balls.
- More visual updates - Nike and EA have refreshed FIFA's game engine, introducing visual updates to the game that deliver more realistic images on pitch.

FIFA, short for Forza Italia Football Associations, is an association football video game series developed by EA Canada and published by EA Sports. It was released in September 25, 1989 for the Atari XE2, the Atari Lynx, the Nintendo Entertainment System (NES), the Sega Master System, and the Sega Genesis. The series quickly became one of the most popular console football franchises with multiple games released in the series, including FIFA, FIFA 99, FIFA 2000, FIFA 99, FIFA Street, FIFA Street 2, FIFA Street 3, FIFA Street 4, FIFA Street series, FIFA 06, FIFA 07, FIFA 10, and FIFA 11. Gameplay FIFA is a football video game where players use physical attributes such as speed, strength, and stamina to control a ball by kicking, sliding or passing the ball. There are two styles of gameplay modes: Simulation and Arcade. Simulation mode, introduced with FIFA 99, is a simulation mode that allows players to control a team. Players are able to create and customize a player through a character creator, along with settings such as skin colour, and then sign him/her up for a team. After creating a player, the user is able to play solo, with up to three other players on the same console, or a community, which is more realistic. Arcade mode, introduced with FIFA 2000, is a shooter-style mode where the players compete against the computer-controlled opposition. The core gameplay, tackling, and collisions are accurate, while the handling is arcade-style. Players are able to score in FIFA by striking the ball with their boots. Goals can be scored either by dribbling the ball past the opponent into the goal, or hitting the ball with a cross. Gameplay can be enhanced through the use of player equipment, such as goal-line technology, which can be acquired through the use of coins and/or goals scored with a player-provided goal. Player skills (such as dribbling, shooting, or passing) are not controlled by the player through this equipment, as they are controlled by the player's skill rating. Notably, the distinctive over-run scoring system was first featured in the early versions of FIFA, but was removed later in the series. FIFA is the fourth gaming series to be published by EA Sports, the first being FIFA Soccer (which was followed by EA Sports Football). The predecessor to EA Sports FIFA series is Electronic Arts' EA Sports games; the bc9d6d6daa
