□

FIFA'20 has introduced a number of game-changing innovations. EA SPORTS also introduced 'Essential Exhilaration' to FIFA 20, which encouraged players to use the game with a strategic and high intensity gameplay style. "FIFA 20 is the best FIFA ever," said Peter Drage, Executive Producer at EA SPORTS. "With innovations like Virtual Pro Positioning, the Aerial Prediction System and the new Hyper-Motion Technology, we are delivering FIFA to a new level. We also added the Essentials Exhilaration System, which gives players new ways to play FIFA and really brings them into the game. We are excited to share the new FIFA with the world." Features: Player Positioning: In FIFA 21, a deeper understanding of how the player positions in space and how the ball moves across the pitch is a key feature of gameplay. "Essential Exhilaration" is a new rating system, which increases the amount of variation when you dribble the ball or are tackled. Players progress through three incremental levels: Beginners, Intermediate and Exhilarated. Players can now be guided through their first steps in the game using the "Recipes". Players can choose from a set of easy-to-follow tutorials to help them get started and learn the

essentials of FIFA gameplay. Aerial Prediction: The Aerial Prediction System has been improved. The system identifies when a defender is approaching from an angle, allowing you to time your ball with the player's movement. The system has been trained using data from the real-life gameplay of 14,000 players. It can also predict an aerial shot that is ready to be taken, and can detect when a shot goes off target. The feedback given to a player, whether they need to adjust their heading or shooting strength, is immediately available. Rotation and Kicking Mechanics: Rotation mechanics in FIFA 21 have been tightened. Players can now use the whole of their body to rotate the ball in the desired direction. In addition to this, Kicking Mechanics have been further improved, with running speed now being calculated based on the height of a ball kick and the distance from goal. In addition, the timing of a player's run-up is calculated on a real-time basis. If a player takes longer to run from one position to the next than expected, their run-up and shot timing will be delayed. Players can now also use a
