If you have Photoshop, you can view and edit Photoshop files with Photoshop Elements even if you do not have Photoshop. The file extensions are .psd and .psd. Trimming Part Of The Background The easiest way to add a rectangular area of the background to the editing process is to use the Trim tool. Click on the Trim tool in the toolbar, and click on the thumbnail of the image you want to edit. This will create a selection around the thumbnail. Once you have the selection highlighted in a thumbnail, you should be able to move the sides of the selection by dragging the corners. Hit the Delete key and the selected area will be removed from the image. You can remove the background in sections by highlighting several thumbnails and then hitting Delete. This removes only the highlighted areas. You may want to select the move tool and click and drag the cursor across the image to move the highlight. Erasing Parts Of The Background If you are editing a color photograph, you may want to remove some of the colors from the background and add it to the foreground. Click on the Eraser tool on the toolbar, click on the thumbnail of the image you want to erase, and it will highlight the area on the image where you want to remove the background. This is a difficult step, so pay attention to which areas you remove or the background may be removed unevenly. You can remove the background in sections by highlighting several thumbnails and then hitting Delete. This removes only the highlighted areas. You may want to select the move tool and click and drag the cursor across the image to move the highlight. Creating A Photo With No Background If you do not want to have a background on your image, you may want to remove it entirely. The way to do this is to first add some background to the image by adding a background color to the image. Using the same technique you used to remove the background in the first example above, use the Eraser tool to remove the background on the image. After you have removed the background, you may want to add a new background or color to the image. Removing All of the Background You can remove the entire background by clicking on the Layer Mask on the Layers palette. This will make the entire image mask and the background should disappear. Duplicating a layer There are a couple of ways to duplicate a layer. You 05a79cecff

Tories leaning on May to be new PM as she plans to step down Conservative Party leadership candidate Andrea Leadsom arrives for the first leadership debate at the Civil Service College in central London, Britain May 12, 2016. REUTERS/Neil Hall By Robert Pritchard LONDON (Reuters) - The chances of a smooth transition to Britain's next prime minister from Theresa May after the country goes to the polls in June are "pretty close to zero," one of her closest Cabinet allies said on Tuesday. "You can't make those sorts of rules up," the source said, explaining that the party's top lawyers were leaning on Conservative MPs to back May as their leader after the election. A former prime minister, her predecessor David Cameron, is due to announce his resignation on Wednesday and leave office after May succeeds him. May, who wants to stay on, has been urged to name a new leader after the vote and could stand down herself next week. Leaders of the Conservative Party, which has traditionally dominated British politics, can be chosen by an internal ballot of party members and by the votes of MPs in the House of Commons. The source said they had been told it could take months to resolve the leadership issue. Another colleague said that while May might be able to stay on for a few weeks as she carries out her duties as prime minister, she was not likely to be able to remain for long. "There's no way that she's going to stay on for a year or two, at least at this stage," the source said. He said May was unlikely to have enough support in the House of Commons to remain even briefly after the election. A third Conservative lawmaker told the BBC that it had been made clear to him that May was likely to be the next prime minister. "Every senior minister is on the same page," he said. He said she was still the most likely candidate to become prime minister but "I think most people who know her think she's not going to be that person, at least for six months." He said Cameron's aides were pulling strings to try to persuade his successor to stand down. "It seems to me that his team are very keen that Theresa May goes first," he said. Cameron is due to announce his resignation on Wednesday before announcing who will

Light intensity, photoperiod, and season affect both morphogenesis and flowering time in periwinkle (*Catharanthus roseus*). Light, photoperiod, and season affect many aspects of plant life cycles. In *Catharanthus roseus*, the determinate perianth-bearing shoot apex sends out an indeterminate lateral apex which later forms a bud. Flowering is induced by changes in light and photoperiod and influenced by other seasonal factors such as temperature. Here we examine the effects of photoperiod, light intensity, photoperiod, and season on both vegetative and reproductive development. *Catharanthus* shows photoperiodic response which has been typified into three distinct groups: (1) phytochrome-dependent (PD); (2) phytochrome-independent (PII); and (3) facultative photoperiodic (FPD). The FPD group, which typifies the indeterminate perianth-bearing shoot apex, showed seasonal flowering with a late onset and delayed flowering in late spring and early summer. PD showed a clear vegetative growth period which overlapped the flowering period. PII failed to flower during summer, but germinated and produced normal basal rosettes the following spring. Thus, PII was described as phytochrome-independent vegetative photoperiodic (PIV). Although FPD plants flowered during summer, they were delayed relative to PD plants. The delay in flowering, with FPD, was consistent throughout summer until the last month of the flowering period. Even when plants flowered during the last week of the flowering period, flowers were in a de-differentiated, non-flowering stage. We conclude that the flowering process in *catharanthus* includes two separate stages which appear to be influenced by light, photoperiod, and season. The flowering process first involves morphogenesis which is dependent on light intensity and photoperiod; flowering then occurs by inducing the anther and stamen to undergo change into a receptive phase, despite the fact that the plant is photoperiodically non-responsive (FPD). The present invention is directed to a stent delivery device that is useful in the interventional medical procedures, including percutaneous transluminal coronary angioplasty (PTCA) and percutaneous transluminal angioplasty (PTA) wherein a balloon catheter or other device delivery systems are employed. More specifically, the present invention is directed to a stent
