I have documents stored where some have data on a couple of collections and some have data on more than one collection. I need to be able to search in the collections array to find other documents (with other collections) that have some data in common. If the collection array contains 3 items then a search with 'abc' in the titles will return all 3 documents. If the collection array contains 5 items then a search with 'abc' in the titles will return 2 of them. I have tried something like this: var es = require('elasticsearch'); var client = new es.Client({ host: 'localhost', log: 'trace 3a67dffeec
