This can cause uninstallers to display error messages as it attempts to uninstall the component again. Alternatively, you can use an add-on called Smart Uninstall (in the Add-ons category in Steam) to uninstall any previously uninstalled component before attempting to reinstall the component. Reboot your computer. Click the Steam logo in the upper left-hand corner of your Steam client. Select Games from the drop-down menu that appears. Select "Manage Add-ons". Select "Steam > Settings > Add-ons". Uninstall any components that are no longer installed on your computer. Reboot your computer. Select the install button (Steam > Install Games). Select "Steam > Settings > Add-ons > On". Select "Install" or "Reboot" (your option).
