* **Adobe Photoshop:** This is the version of the program discussed in this book. * **Photoshop Elements:** This is a low-cost version of the program that's also taught here. ## The Big Picture: Vision and Photography The best term to use when thinking about images is "vision." In theory, vision means the ability of your eyes to capture images. In essence, an image captures what you can see. On the other hand, the term _photography_ means the ability of cameras or other image capture devices to record images. The two terms are connected. * A photographer sees the world with a vision, meaning that a photographer has the ability to select an image with vision. * A viewer of a photograph also sees the world with a vision, meaning that a viewer must be able to view an image that reflects vision. In this section, I discuss capturing images with vision, describing the elements that make up images and some ways to capture them. Also, I show you some tips for capturing images that reflect vision.

Andy Dalton - a dead-eye QB by mikenovgluckfella I got to observe Andy Dalton for several games in high school and college and have been following his progress closely ever since. In college, the kid was 6-4 and 224lbs, and I was sure that he was a physical specimen of a quarterback. Watching him in the NFL, however, and on TV, convinced me that he was probably 5'11" and probably more than 300 pounds... I was surprised by how well he looked the first time I saw him in person, though. He didn't have a cape on, but he definitely had a mean stare going on. He played well as a freshman when he was in the 6th game of the season with a beating Cincinnati team giving up more than 40 points and nearly 500 yards a game, and he looked like it was in the bag for the season. Then the next three years saw him play the role of backup to two Heisman Trophy winners, and he just didn't get any better. He was in position, he looked good, he could throw the ball well, but he simply didn't have what it takes to put up gaudy stats. In college, you could say that he was a walk-on to get into a great football school and he's had two years of getting great coaching and one year of sitting on the bench, so he wasn't starved for anything. I just don't know how to explain it. As a pro, he's gotten better. Last year, he was very good. He made a lot of progress. I would still call him a player with a lot of potential, but after watching him play in person again, I'd call him an average to above average NFL starter. He has a cannon for an arm, but he doesn't use it very often. You don't see that many casual fans or announcers wondering how Dalton can go in the same game with a bad down and throw the ball away. I'd still give him a chance to succeed based on his athleticism, his arm, and his ability to make plays with his feet and with his receivers. The thing I hope he doesn't forget is that when you have a bad down, you have to throw the ball away as an NFL quarterback, and your receivers will get you back into the play a lot more often than in college. I'm not calling for panic and saying that he's done, but I am saying that

What's New In?

AUSTIN, Texas—A study has found that vaping has no harmful effect on the lungs of pregnant women. Dr. Olaf Heuser, the principal investigator for the Harvard study and a professor of environmental medicine at the Brigham and Women's Hospital, was quoted on MedPage Today as saying that the study results are, "really good news for both the public health and the vapers." The new study has been in the works for the past five years and was funded through the National Institutes of Health and the U.S. Food and Drug Administration. It began this year and it is currently ongoing. Vaping is becoming more popular among adults, but it is still not acceptable for minors to do so. Just this week the Centers for Disease Control and Prevention advised pregnant women against using e-cigarettes. The study's authors were looking at pregnant women ages 15-24 years, as well as women ages 35-44 and 45-54. They all consumed "cigalikes" or disposable e-cigarettes containing nicotine and no marijuana. The study used these newer devices because the most popular models from five to seven years ago were made of plastic.The present invention generally relates to an improved pipeline sampling tool for collecting a sample of fluid at the line-at-depth of an oil and gas well and more particularly to a sampler which is constructed so as to minimize surface turbulence and thereby improve the accuracy of the fluid analysis. During the drilling, completion and production of oil and gas wells there is often a need to monitor and sample various fluid parameters at the line-at-depth in the wellbore. For example, it may be desirable to take a sample of the formation fluid at various intervals during production and treat this as a production sample. It may also be desirable to take a sample of the formation fluid to determine its hydrocarbon content. This is particularly important when the formation fluid is under a hydrocarbon vapor pressure, since the formation can become contaminated if the vapor pressure is exceeded. In order to determine the hydrocarbon content of the fluid, it is necessary to determine the amount of hydrocarbon vapor or gas present in the fluid so as to accurately determine the quantity of hydrocarbon content of the formation. This can be accomplished by measuring the amount of gas in the fluid. As noted, it may also be necessary to obtain a sample of the formation fluid at various times during the production of the well. This is generally performed when the
