## What's New In Mac Photoshop Cs5 Download?

1. Field of the Invention The present invention generally relates to electric toothbrushes and, more particularly, to an electric toothbrush that provides for multiple modes of operation. 2. Discussion of the Related Art Electronic toothbrushes for domestic use typically have to meet certain basic requirements. The electronic toothbrush has to be compact and lightweight, must be intuitive to use, and the manufacturing cost should be kept as low as possible. The conventional electric toothbrush employs a brush moving in a reciprocating motion. One example of a conventional electric toothbrush is shown in FIG. 1. The toothbrush 1 includes a handpiece body 2, a handle 3, and a motor 4. The motor 4 is disposed in the handle 3. A switch 5 is mounted on the handle 3. An end of the handpiece body 2 is received in the switch 5. The motor 4 has a shaft 6, which extends out of the handle 3. At an end of the shaft 6 is a driving gear 7. The driving gear 7 engages a gear 8 that projects from the handpiece body 2. In operation, when the switch 5 is turned on, the driving gear 7 rotates. Consequently, the gear 8 is driven by the driving gear 7, which in turn drives the brush 9. The brush 9 is in the form of a brush head 11, which projects out of the end of the handpiece body 2. The conventional electric toothbrush has the drawback that the brush head 11 is exposed to the outside air. In particular, bacteria and other germs can easily adhere to and contaminate the brush head 11. The conventional electric toothbrush has a further drawback in that the motor 4 consumes a lot of power and is noisy when in operation. This leads to frustration and lack of patient compliance. Q: On-click on plugin's - do not fire on specific page I'm using a jquery plugin. After select a class I'm setting a new class and then removing a previous class. At this point there's always an inside each . I have a button which when clicked will hide the and show the . It works fine on all pages but one. The problem is that the selector \$('a').click does not trigger when I'm clicking the from that specific page. Has anybody experienced this or have any idea as to why this could be? And how to fix? A: Since jQuery is
