A: Note that '@' is a special character that signals the beginning of a field. Try expanding your field using '%' as your delimiter. This will allow you to see the whole line or your expansion. Basically, piping into cut -d% -f1 or using sed or awk would do the same thing (with the trade off of clarity that comes from using a file or stream, rather than the shell). A high-end acoustical system that you don't have to pay for, that plays back your favorite music online and offline for free. Your iPod's battery will last longer, and your speakers will sound better and last longer too. If you've upgraded to a high-end system, however, you may need a multi-room amplifier. And that means spending big bucks. So what if you already own the hardware? What if you could easily give the components a second life with something like this? The \$700 Allen & Heath AKG DP6 Soundprep System looks and

works like a ton of other high-end gear, but is cost-effective and simple to set up. It's simple and sleek with black and silver accents. The big acoustical output power is 120 watts, and it comes with a remote control so you don't need to have that in your living room next to the subwoofer. It has the same eight balanced in-house microphones as the original DP6 that it adapts to an iPod or computer. (You do need to sync it up through a mobile device like an iPhone or iPad for the best sound quality, though.) Here's how it works: You plug it into any sound system's digital audio input, and then plug your iPod (or iPhone, iPad, or computer) into the front port of the dock. The software adapts to the audio hardware and a stereo audio input from your computer, and then plays back music perfectly, both online and offline. When you want to change the song, you can use the remote control to switch to any other song. And there are plenty to choose from online. The big catch is that you'll need a pair of the \$29.99 Micro sub-woofers, which you'll also need the accompanying amp (\$240). That makes the system \$700 all told, and you'll need to spend another \$260 or more for speakers and speakers boxes.
