Spiderman 3 Game Download For Pc Full Version 16 Spiderman 3 Game Download For Pc Full Version 16 Spiderman 3 Game Download For Pc Full Version 16 Patients 'vital' in new Manchester campaign The Manchester campaign has been launched and looks to focus on the vulnerable patients who doctors believe would benefit from having a life-saving procedure. Manchester 10.11.13 Wednesday 11 November 2013 is the date for the launch of the NHS Greater Manchester's new clinical campaign. Saving Lives Manchester, created by MCRH, South Manchester University Hospitals Foundation Trust, is the brainchild of Dr Jenni Brand-Miller and Team Physiologist Dr Tim Noakes. It aims to bring personal stories from patients who live with a condition that could be treated but who have not considered having the procedure. The story-telling will be used in conjunction with material from world-leading figures in sport and medicine. The campaign will run throughout 2013 and will provide MCRH staff with the opportunity to share the personal stories with patients on a regular basis in their outpatients departments. Following the medical research completed by Dr Brand-Miller and Dr Noakes over the past five years of furthering the practice of evidence-based medicine and of improving the health of the people of South Manchester, the idea of 'Saving Lives Manchester' was born. Working alongside South Manchester University Hospitals Foundation Trust, including their Patient Representative Network, the team at MCRH has identified the 10 most serious and life-threatening conditions that are candidates for surgical intervention and they will be highlighted in the campaign. "As a condition specific commissioning manager I'm constantly amazed at how patients and their families are unaware of the conditions that are easily treated and which could improve the quality of their life. More needs to be done to better inform people who live with a condition about the treatment options available and how the best options can improve their lives. "It's these patients who want to know they're looked after and this campaign is about doing that. The campaign will be launched on Wednesday 11 November and run all year. The style of the campaign will change along with the academic content, so watch this space! "Through the campaign we hope to inform patients about the conditions we believe have the potential to improve their lives. We believe the campaign will have a real impact on patients and their families and I
