OS is an umbrella term that includes many distinct kinds of software, including kernels like Linux and BSDs, user space operating systems (e.g.,

Windows, macOS and UNIX), and server OSes (e.g., AIX and the BSDs). The OS also includes a collection of various software that help applications communicate and access the hardware resources that the applications need to perform, such as devices, services, and storage. A DEV (device driver) is a piece of software that manages a hardware device, or a piece of hardware that is connected to a computer. DEV is a generic term that includes devices such as hard disks, CD-ROM drives, video adapters, and serial, parallel port, and USB controllers, among others. In computing, a COMP (computer application) is software that is intended to perform a specific, often well-defined task. A computer application may include one or more routines, files and program modules that can be executed in different combinations and sequences to achieve a desired overall result. For example, a web browser and an e-mail client are examples of an application that is composed of many different programs. A DISK (storage device) is a storage medium, which usually stores large quantities of digital information. A disk may be a magnetic disk

or other kind of solid-state medium, and may be an optical disk, such
