The organization — which is a subsidiary of the Empire State Development Corporation — said that the survey would feature an interview and examination of variables that could aid in developing a mall. "The 2016 plan for Roosevelt Island includes a mall," the EDC said. "The mall will help revitalize the Island's commercial center and encourage more foot traffic between the Island and the rest of Manhattan." For the control group, the average PODCI scores for the physical, mental and social domains were higher than the average scores for the subjects with PE. However, the subjects with PE had significantly higher scores than the control group for the energy/fatigue and parental time domains.
