2. Login and click on the Autocad menu option and select the Keygen option. You will see a box where you need to put your keys 3. Save the keygen and close the window. Bacillus anthracis (BA) causes one of the most serious bacterial diseases in mammals and is a potential biological weapon agent. A major virulence factor of BA is the ability of the pathogen to produce three toxin proteins: lethal factor (LF), edema factor (EF) and protective antigen (PA) (Brock and Geisbert, 1997). LF and EF form a membrane-inserted toxin complex that renders macrophages and dendritic cells non-responsive to further stimulation (Zhang et al., 1995; Moayeri et al., 2001). PA binds to specific host cell receptors (Belisle et al., 1999; Arora et al., 1999) and promotes the translocation of EF into the cytoplasm where it binds to and proteolytically inactivates ribosomes (Dianzis and Rutter, 1998). The EF-ribosome complex activates translation of a pro-inflammatory transcription factor, NF-κB, and a pro-inflammatory cytokine, TNF-α (Herrmann et al., 2003; Brown et al., 2005). BA is a rod-shaped gram-positive bacterium that exhibits a worldwide distribution and is highly resistant to environmental factors (Brock and Geisbert, 1997). BA replicates rapidly in blood (Liu et al., 2005) and causes a fulminant systemic disease characterized by fever, weight loss, and skin lesions (Brock and Geisbert, 1997). The pathogen is considered to be the causative agent of anthrax because cutaneous lesions caused by BA produce "anthrax spores" that are considered the basis for post-exposure prophylaxis. Current antibiotics are effective in curing BA infections, but at the expense of increased morbidity and mortality. For example, a novel formulation of the drug combination clindamycin (clindamycin phosphate) and rifampin (rifampin) administered orally has been associated with an approximate 10% mortality rate (Kraus et al., 1998; Fine et al., 1999). Additionally, long-term antibiotic therapy (e.g., 4-6 months) may result in serious, potentially lethal, side effects.[Selective embolization
