Stay on top of your schedule, stay on top of your life. It's a challenge that EssentialPIM Pro Portable can help you with. All you need to do to start staying organized is to create a profile and add accounts, which is as easy as it can get. The intuitive interface is full of useful functionalities, which you can instantly start using. The email function allows you to reply, send emails, and create reminders. And, of course, you can also access your most commonly used passwords. What this program can do is pretty clear-cut from the beginning. The tab design allows the users to easily navigate from one menu to another, the options they provide being quite valuable. For instance, the Today tab shows you what's on our calendar for the current day, offering the ability to create new tasks and appointments. Anything you add in the Calendar and Tasks tab will automatically also appear on the main window, where you can see what you've got going on at a glance. Speaking of syncing, there's also the possibility to link up with popular mail services such as Google and Microsoft by adding your accounts. What this does, besides providing you with the mail feed for those accounts, is also fully sync your tasks and schedules with those calendars. When you add something in EssentialPIM, it also appears on your Google Calendar, and vice-versa. A mail client and password manager? It is not just a mail feed that this software provides. You can send emails and reply, just as if you were using a normal, full-blown client. Accounts based on IMAP and POP3 mail services can also be added, further extending on the convenience factor of this app. There's also a password manager, which can also act as a generator for intricate login keys, just like the ones from Bitwarden and Lastpass, for example. It certainly helps a lot in staying on top of the increasingly bigger number of sites requiring authentication nowadays. All of the data you store in EssentialPIM Portable can also be saved to Dropbox, which ensures that you won't have to worry about it getting lost. This is some impressive software, and the fact that it manages to pack so much functionality, all the while remaining a portable app, is commendable. In order to find the no. of binary direct numbers having "1" in the first position, the solution given is "4" as in the example given. What I could understand is, that first the integer 4 is taken in the array of 2 elements and then each element is parsed to find out whether it contains "1" or not. int[] array = {0,0,1,1,1,0,1,1,0}; To find out we need to find out whether the array contains 1 or not. Then based on what has been found we should keep on going and at each step we will be able to read in the binary representation of all such numbers. Following is my question: Is there any other method to do this instead of the below solution given in the link? However, a little more generic approach will be helpful for me as I will do it for the case where there are "2" in the first position instead of "1". So how to obtain the most beautiful direct binary no. of no. having "1" in the first position?
