What's new in Tower Of Portal:

is a video game developed and published by many-splattered, many-distributed, many-independent company Dakko Dakko (DD).

DD had previous been a platformer game company called Maxi Games. After several years of success as DD, it was decided to take a company-wide major change. DD dumped Maxi Games and instead focused on 3D fun for everyone, while still occasionally focusing on games with strategy elements and enabling players to "prove" their high scores and achievements, through a high-scorer's system. DD's latest game, Tower of Portal, is the seventh game to (as of publication) feature this system. The titular tower is a building that houses a cave with a totally underground entrance. As per its design, the entrance has a teleporter, that is used to move a player between the inside and the outside of the cave. Of course, the only entrance is the one, and therefore, the only way is up. This is the same system as found in Portal. A former administrator of a Maxi Games game forum theorized that the system might be a tribute to Portal's creator's previous main company, Valve. Valve's only game based on a teleporter system is Portal 2. The tower Throughout the tower of Portal, the player encounters a third-person girl who needs help from the player to go up in the tower (this could be an intentional knock-off of the popular game, Rayman 2). Help is offered either by the option to complete the game's primary minigame (the arcade-style game, in which the player must face a few short levels of difficulty, repeatedly) or by an option to choose a certain additional path. The tower is, similar to the original Portal, open to many other tasks and levels: early examples are "climb climbing-like contraption", "climb another contraption", and "climb something else". Eventually, many new paths are unlocked. The map The game is fully navigable as "an interactive map, with a lot of cool gimmicks and secrets". It is long, fully navigable, and originally, different aspects of the tower are separate and independent of each other. For example, although the first level of the tower had an elevator, there is no current way to get there. When the player of the game has already played only two levels, the player can try to get the elevator working again, by defeating
