HyperMotion technology was introduced in FIFA 19 with the introduction of a revamped Frostbite Motion Engine, powered by AMD's "Radeon Instinct" GPUs. At this point in time, there are no known details as to which upcoming CPUs will be supported by this technology, and currently no information is available on whether it will work with mobile-based platforms. For those interested in learning more about HyperMotion technology, we have extracted some of the content from Ian McGarry's media presentation, which will be shown at E3. Intel was incredibly helpful in implementing this technology into FIFA for us. At Siggraph, we presented the technology behind Frostbite Motion to their audience, and we were excited to have such a high-caliber technology demo being executed live by several Frostbite team members, and of course, representatives from Intel. Away from the motion capture labs, at Siggraph we also got to spend some time with the Frostbite Motion team, showing them how to make use of the technology so it can be used directly within a game engine. We got the chance to see how their engine-agnostic motion capture technology is used in a game, and got some in-depth tips and tricks to make the technology your own. We also got a chance to see the technology in action, visiting the motion capture labs to see the new motion capture suits in action!

AMD Partner Code

The first thing we should highlight is that HyperMotion technology uses the partners' AMD-based code. Ian McGarry, SVP & Chief Technology Officer at Electronic Arts, said this in an interview with AMD: "EA is a strong AMD partner on Frostbite and Frostbite Motion. We were able to implement it into FIFA on day one without rewriting code." The HyperMotion solution is completely powered by the motion capture and real-time ray tracing capabilities of the new Radeon GPUs. Ian McGarry noted that Frostbite Motion allows them to do what they want to do: capture everything and everything is correct. Hypetech is a brand-new technology. It's not just about capturing the movement, it's about capturing human movement. And if you go back to the original 2001 Far Cry, you'll see that we are trying to capture the human experience. And with Hypetech, you capture all the nuances of the human body. Although there is a lot of technology that's

FIFA Soccer is an association football video game developed by EA Canada and published by Electronic Arts for the PlayStation 4, Xbox One, Wii U, and PC. It was released on PlayStation 4 in September 2015 and was later released on Xbox One and the PC in August 2016. A Nintendo Switch version was released in November 2018, and a Microsoft Windows version was released in May 2019. The Wii U and PC versions support cross-play with the Xbox One version.[1][2] Contents The game is the fourth installment of the FIFA franchise, and was released on September 22, 2015,[3] in North America, September 27, 2015,[4] in Europe, September 30, 2015,[5] in Japan,[6] and on November 13, 2015, in Australia.[7] The game was released on September 27, 2015, in Australia.[8][9][10] A new series of gameplay techniques are introduced as well as new scoring and dribbling moves. Unlike previous titles, the game is geared more towards international play, with the introduction of national team franchises for each nation, each of which can contain up to twelve national teams. The game also features single-player modes, with the introduction of Career Mode, as well as Ultimate Team and MyClub modes, which were formerly featured in the previous games.
