displays the options that you can filter or change. In the previous table, we have selected all lines. For further information about this feature, you can refer to the tutorial here. In this tutorial we will: Create an editable view of our model in Ortho mode Turn off the grid lines for simplicity Use the Radial Filters for a

smooth transition Creating an editable view of our model in Ortho mode When you create a project in Ortho, the environment displays a perspective view of the model. We could have saved the changes we made but it is better if we create a new file because when we save an Ortho project, we save all

layers as a new file. With this way, we will be able to continue editing the model without losing any changes. Per-Layer Filters and Settings Select Layers/Filters from the Layer Select dialog box as shown in the next figure. Use the Layer Filter drop-down list to filter the layers. Cortana, among many other things. Q: how to get list of all files and folders on FTP Server I have tried searching for the same but could not find the exact answer. I am trying to get the list of all files and folders which is accessible from the FTP server. This is what I have tried so far: ftp = FTP("ftp://"+my_user+"@"+m

y_ip+"/") ftp.login(my_user,my_pwd) all = ftp.dir() for item in all: #print item print item.name But the problem is, I am getting a lot of items in the folder, which are actually sub-folders. So I need to filter the list and get only the directory which is in the root. Does anybody have any idea how to do that? A: You can use

listdir() method.
from ftplib import
FTP ftp = FTP("ftp://
"+my_user+"@"+m
y_ip+"/") ftp.login(m
y_user,my_pwd) pri
nt(list(ftp.listdir()))
Here is the output:
['index.html',
'file.jpg', 'file.shtml',
'file.html', 'file.php',
'file.doc', 'file.txt']
Notice that you will
get your folders
listed as well. A: As
far as I know, FTP
