In approximately one third of the patients with renal artery stenosis, stenting is the preferred intervention for carotid artery disease. However, there is still debate on the efficacy and safety of renal stenting in patients with renal artery stenosis. The present review explores the rationale and design of clinical trials and the available literature on renal stenting. Data from available clinical trials of renal stenting in native renal artery disease are reassuring with respect to both safety and efficacy, but the results from renal stenting in occlusive renal artery disease are less encouraging. However, it should be noted that the reported early morbidity and mortality following renal stenting are very low, and there have been no long-term clinical sequelae of renal artery stenting. At present, renal stenting is a reasonable treatment option for symptomatic renal artery stenosis. Further studies are needed to confirm the safety and efficacy of renal stenting.Mark Rothko and Leo Castelli. Thirteen Paintings. Tate Modern, London, March 2-May 2, 2006. Review by Mark Greenhalgh, Guardian, March 15, 2006 The Tate Modern is the new name for the old Tate Gallery and, having once seen it, you will never again be surprised by any new building. It is a stunner, a modern art museum made in the image of Turner and van Gogh, Rodin and Houdon and Pollock and Lichtenstein. Its soaring titanium structure – designed by the Swiss architect Peter Zumthor – is wholly appropriate for the Tate, its austerity matched by the austerity of the artworks it holds. It is, even by museum standards, an austere place: an antechamber before af5dca3d97
