PIRATE AWR A True Delight Using MinGW CRACKED™. 34Q: Swift 3.0 - Remove property from nested class I'm working on Swift 3.0. I'm trying to remove some properties from a nested class. Here is the class: class NetworkReachabilityManager { class func checkConnection() { let host = "www.google.com" let isReachable = NetworkReachabilityManager.sharedManager.isReachable(with: host, flags:.reachableNow) } } I tried to remove the isReachable property like this: class func checkConnection() { let host = "www.google.com" let isReachable = NetworkReachabilityManager.sharedManager.isReachable(with: host, flags:.reachableNow) isReachable = nil } But the isReachable property was still retained. How should I remove the isReachable property from the NetworkReachabilityManager class? A: You are trying to use the method checkConnection() which is not defined in your NetworkReachabilityManager class. For example, it is defined as class NetworkReachabilityManager { class func checkConnection() { So, that method is not a member of the NetworkReachabilityManager class, and you have to use this class func checkConnection() { let host = "www.google.com" let isReachable = NetworkReachabilityManager.sharedManager.isReachable(with: host, flags:.reachableNow) isReachable = nil } instead. Accompanying the recent social media boom has been a furore over fake news. The phenomenon doesn't just affect offline information; Facebook algorithms are swaying the way our social media are impacting offline realities. In this episode of the Harper Spectator Podcast, we'll look at the origin of the fake news bubble and explore why we care so much about fake news. For much of this time, our prime concern with fake news has not been the quality of the news itself, but the way the media are framing the issue as c6a93da74d
