More specifically, the present invention relates to a method and apparatus for pulse width modulation of direct current (DC) to DC switching voltage regulators. Switching regulators operate by storing energy in a switching capacitor. An analog input signal is converted into a series of pulses which are applied to a set of switches. The switches in each set are selectively closed and opened in synchronism with one another to transfer energy from the switched capacitor into a load. The load consists of a source of DC power which is, in turn, connected to the DC output terminal of the switching regulator. The following U.S. patents are related to switching regulators: U.S. Pat. No. 4,283,639, issued Aug. 11, 1981, entitled "Switching Regulator"; U.S. Pat. No. 4,406,846, issued Sep. 27, 1983, entitled "Switching Regulator Utilizing Sense Signal to Shunt Regulator Circuit"; and U.S. Pat. No. 4,507,272, issued Mar. 26, 1985, entitled "Switching Regulator Utilizing Biased Current Sense Signal". A general object of the present invention is to provide a method for pulse width modulation of direct current (DC) to direct current (DC) switching voltage regulators. A further general object of the present invention is to provide a method of pulse width modulation which includes control of the duty cycle of the switching pulses for DC to DC switching voltage regulators. A still further general object of the present invention is to provide a method of pulse width modulation including control of the turn-on and turn-off times of the switching pulses for DC to DC switching voltage regulators. A still further general object of the present invention is to provide a method of pulse width modulation including the addition of pulses to the switching pulses for DC to DC switching voltage regulators. A further object of the present invention is to provide a method of pulse width modulation which includes the introduction of pulses to the switching pulses for DC to DC switching voltage regulators in which the amplitude and duty cycle of the modulating pulses are set independent of one another.Q: VBA to compare multiple strings in an Excel sheet Hey all, i have a series of column data (A, B, C) c6a93da74d
