To investigate the effects of calcium hydroxide and 3% sodium hypochlorite on the dentin permeability of the root canal walls. Thirty-two single-canalled mandibular premolar teeth were included in the study. The teeth were endodontically prepared and were randomly divided into 4 experimental groups (n = 8): calcium hydroxide ($Ca(OH)_2$) (Ca), sodium hypochlorite (NaOCl) (Cl), $Ca(OH)_2$ + NaOCl (Ca/Cl), and 2% H_2O_2 (H_2). The dentin permeability was determined by using the fluid-filled technique. The values obtained were analyzed statistically by using analysis of variance (ANOVA) and the post hoc Tukey test. The mean values of permeability were 2.12 ± 0.48, 0.00 ± 0.00, 2.25 ± 0.40, and 0.62 ± 0.32 μL/min for $Ca(OH)_2$, NaOCl, Ca/Cl, and H_2, respectively. There was a significant difference ($P < .05$). $Ca(OH)_2$ does not affect the dentin permeability of the root canal when used alone.Q: Passing javascript variable into php code I am trying to pass a javascript variable into php code using an ajax request. I tried to solve this issue by using a jquery script: var varName = "foo"; $.ajax({ url: "index.php", cache: false, type: "post", data: {varName:varName}, success: function c6a93da74d
