Faceware Analyzer 2 0 crack cocaine - New furniture in sims.. the most progressive app to perform Face recognition on PC Faceware Analyzer 2 0 Crack Cocaine.Lunar Program South Korea prepares to launch a lunar probe to find water A South Korean scientific satellite called Lunar Mapping Satellite 3 takes a picture of Earth's moon in October. It could become the first spacecraft sent to the moon's south pole, the region that contains the most water. It's designed to find natural resources that can be commercialized. South Korea will launch its first unmanned lunar probe this month to search for water and other resources that can be commercialized, said Kim Dong-soo, head of the Korea Aerospace Research Institute, the government agency that manages the project. Kim, who is also the institute's president, said the South Korean team could succeed in the mission in "the foreseeable future." The mission will launch a small, lunar orbiting satellite called Lunar Mapping Satellite 3. South Korea was one of nine countries to win a contract for its launch on North Korean rockets. They paid about \$50 million for the launch, which will take place in April, according to industry officials. The mission, still in the planning stage, is a key part of South Korea's efforts to establish an independent space industry and boost its scientific capabilities. "It's really an independent space program that we're talking about. So, it's not just a small satellite program. It is a lunar development program to develop a new technology," Kim said. The Lunar Mapping Satellite 3 is designed to not only search for water, but also map the lunar surface and search for natural resources, like metals and minerals. South Korea is no stranger to sending probes to the moon. One of the most famous ones is the Chang'e 1 and Chang'e 2 spacecraft. Both became famous for their Chang'e lunar probes. Lunar programs have been extremely successful for both South Korea and North Korea. North Korea has sent a series of small satellites to orbit the moon and recover fragments of a long-dead Soviet satellite in an attempt to escape international sanctions. South Korean programs, meanwhile, have pushed

---

to explore and exploit the moon's water, a potential source of rocket fuel. South Korea's first lunar probe, Chang'e-1, launched in 2007 and was the first spacecraft to land on the moon's surface in 2010. A second probe is currently under construction and slated to launch in 2015. Chang'e 3 will land a rover and can transmit images to the Earth in lunar orbit. If successful, the mission will be the first to land on the moon's equator. Kim said the mission was designed to give South Korea a head start on the lunar program. "It would give us first mover advantage. We would have a head start. We could go in there early. We could be the first to go there. We could explore more effectively in the beginning," Kim said. The South Korean government hopes to build a moon-based economy through its space programs. "We will have enough energy, water, and minerals, and should be able to have a sustainable economy based on the moon," Kim said. Some analysts have suggested that the South Korean space program is not as far along as its competitor in China. But Kim said the long lead time for South Korea's space program made it a safe bet that it could lead the industry. "I think this is a perfectly safe bet, because in the past 20 years, we have been doing [space programs] in a very systematic way," he said. "I think this is a safe bet for us. I really think we will be able to do it.
