it is not apparent at first sight, but in heroes there are three possible reasons for the sound track not to load properly. firstly, is that the game either has been badly damaged or is a very old game on cd. if it is the latter, you will need to find a cd which you have the rights to, or, alternatively, if the game has been purchased legitimately, the game maker might have had the rights to the cd issued so that it could be sold or given to the distributor directly. if it has been damaged, then you will need to get a copy which is in good condition. you can also check whether the cd has been scratched, which would mean that the content is damaged and you should take it to an independent testing laboratory. finally, you might have accidentally downloaded the crack along with the game. if that is the case, then it is only a matter of unzipping the file and running the _inmm.dll compatibility tool, and then unzipping the new version of your.exe. this tool installs the correct _inmm.dll that you want to use, and restarts the game. there is even a visual basic example included in the crack that gives a full explanation of how to use the _inmm.dll compatibility tool. this tool can also be used to fix games with 'no cd available' messages. if the game was previously installed on cd, your not exactly being brilliant here. go to www.emu4all.org and search for an already compiled dos version of heroes of might and magic 3. this will be a fully recompiled version of the game with all its cd music removed so you can't get any cd music from this version. it is also the version that the most people want to play the game with, which is why you need to use it. the reason why this example of is called "compiled" is because it has been recompiled and put into a single archive. the build environment that i have used to compile heroes of might and magic 3 was called "sdk1.3" and it is a dosbox build. it has been installed to the directory c:\program files\developer studio 3
