Aug 3, 2019 - JPEGs crackle as if you were shooting in RAW. Use machine learning to convert JPEGs to high-quality RAW for better editing. JPEG is often used as the standard for high-resolution images, and many Web sites compress images by default to reduce file size. But this compression method destroys details such as clarity, texture, and color saturation. Instead, machine learning uses neural networks to convert JPEG images into high-quality versions of RAW images so that they look as if they were taken in low-light conditions. dd2bc28256
