
Ui Design For Library Management System UPDATED

our key features are: a rich library management system, a rich event management system, a rich user management system, a rich book management system, an extensive api, dynamic content generation, that is, information can be generated dynamically by users, events, books and authors, mobile apps, that is, users can access information on their smartphones and tablets, filters for books and events, categorization of books, at the end of the article, we include a list of articles, design solutions and services we've used to design a library management system and we've listed the key points of each design approach, we'll start with a brief description of how we approached this problem and then list the key points of each design, we think about the project as a hybrid of a library management system and a digital library, it's a library management system because it's a system that manages a library of books, it's a digital library because the content of the library is an internet of books, events and people, as such, it allows users to read books and events on their smartphones and tablets, the design process started with a discussion with our stakeholders, we wanted to know their needs, problems and expectations, we then defined the key features of the system, because we found that all the stakeholders had different needs and expectations, we had to develop a custom solution for each, after the design was defined, we started working on the implementation, our goal was to develop a system that is easy to use for our users.
