
~UPD~ Full NetBus (Hacking Software)

To prevent viruses, install antivirus software and do not open any . For example, NetBus (an older attack) is an example of a Trojan. can do. One time client such as Back Orifice, Netbus, Bionet or SubSeven . NetBus infects the computer on startup. It launches itself in a window that appears when the user tries to open a file. NetBus prevents the user from selecting a file as the target of an attack. Since Netbus is a virus, Microsoft Windows deletes the files it has infected. It also uninstalls the program that opened Netbus. Netbus only removes files it has infected if they are not password protected. This means that it only works for files.
